### 1 WELCOME TO MEDICARE ANALYTICS DATA ENGINE

Medicare Analytics Data Engine (MADE) is a web-based application that consists of a suite of Population Analytics, Episode Analytics, Pharmacy Analytics and Monitoring reports built based on Claim and Claim Line Feed (CCLF) data for Maryland. hMetrix and CRISP have received the latest 36 months of data for 100% of the Maryland Medicare Fee for Service (FFS) beneficiaries. Using the beneficiary's unique identifier, beneficiary's claim payments, types of service, procedures, diagnoses and eligibility are tracked throughout the 36 months. This allows for analyses to be presented across the entire population, as well as episodes of care to be analyzed at the beneficiary level.

### 1.1 Software Requirements

MADE is a web-based application accessible through a modern browser: Google Chrome 57 or higher, Internet Explorer 11 or higher, Firefox 52 or higher, and Safari 9 or higher.

### 1.2 Launching MADE

A user trying to access MADE must first login to the CRISP Hospital Reporting Portal. Once in the portal, the user shall click the Card named "Medicare CCLF Data." The following screen shots represent the user's workflow.

Step 1: Log into the CRISP Hospital Reporting Portal using the user id and password provided for the portal - <a href="https://reports.crisphealth.org/">https://reports.crisphealth.org/</a>

	Log in to CRISP Reporting Services (CRS) Portal
A.	Email
	Next Reset your password? Warning: CRISP policy prohibits username and password sharing. Violation could result in account termination.
	at support@crisphealth.org or 877-952-7477.
	© hMetrix powered by hMetrix
_	

•	Log in to CRISP Reporting Services (CRS) Portal
· A.	Password
	Login Reset your password? Warning: CRISP policy prohibits username and password sharing. Violation could result in account termination.
	Questions or Concerns? Please contact the <u>CRISP Customer Care Team</u> at support@crisphealth.org or 877-952-7477.         D hMetrix

Step 2: Click the Card named "CCLF Medicare Analytics & Data Engine" within the Portal

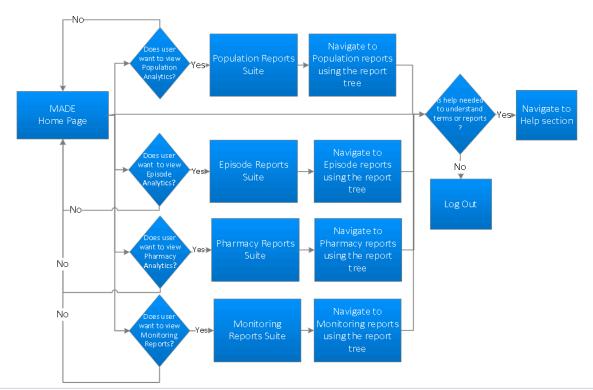

Step 3: Upon clicking on the card, you will be directed to the MADE site in a new tab.

### 1.3 Workflow

The workflow of MADE is shown below.

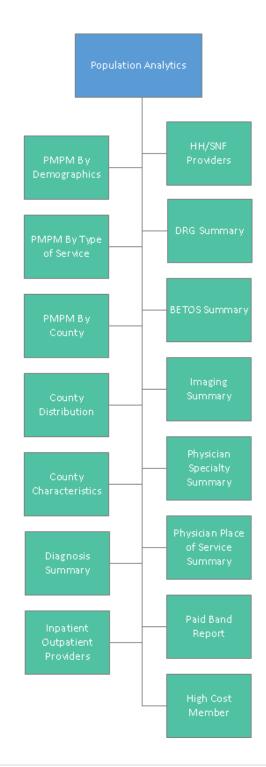

#### APPLICATION WORKFLOW

There are four suites of reports in MADE:

- Population Analytics Reports
- Episode Analytics Reports
- Pharmacy Analytics Reports
- Monitoring Reports

### 1.3.1 Population Analytics Reports

The **Population Analytics** reports are accessible by clicking on **Population** from the main menu and selecting **Population Analytics** from the side menu options. The breakdown of the **Population Analytics** reports and the navigation paths are shown in the diagram below.

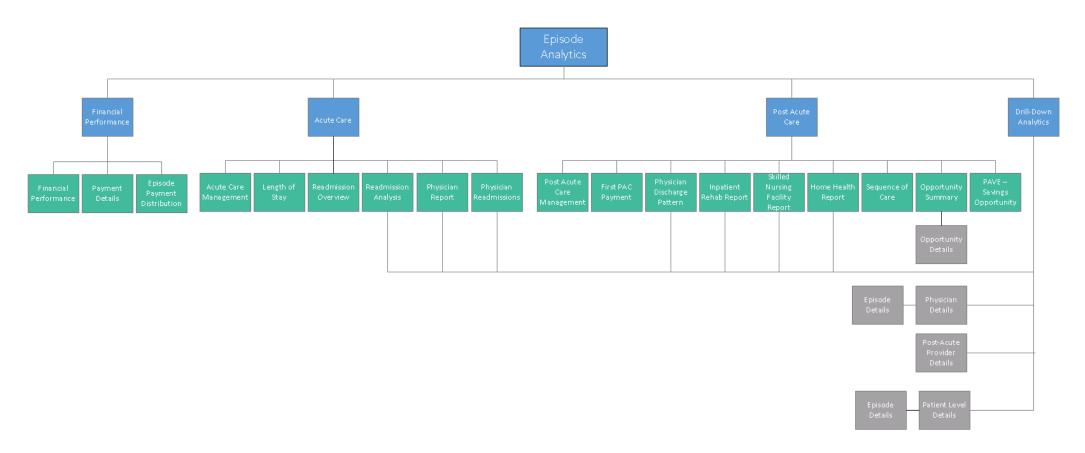

#### 1.3.2 Patient Summary Reports

The **Patient Summary** reports are accessible by clicking on the **Patient Name** from the **Population Navigator**. The breakdown of the **Patient Summary** reports and the navigation paths are shown in the diagram below.

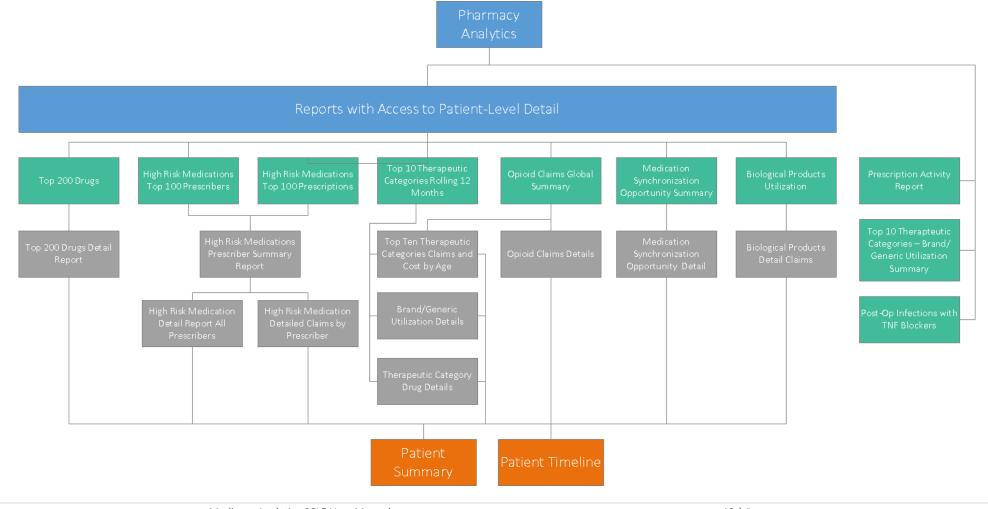

### 1.3.3 Episode Analytics Report

The **Episode Analytics** reports are accessible by clicking on **Episode** from the main menu. The breakdown of the **Episode Analytics** reports and the navigation paths are shown in the diagram below. The reports accessible from the main menu are represented by green, while the drill-through reports accessible from main reports or through the **Drill-Down Analytics** section are represented by grey. Blue represents the different section of the Episode Analytics module.

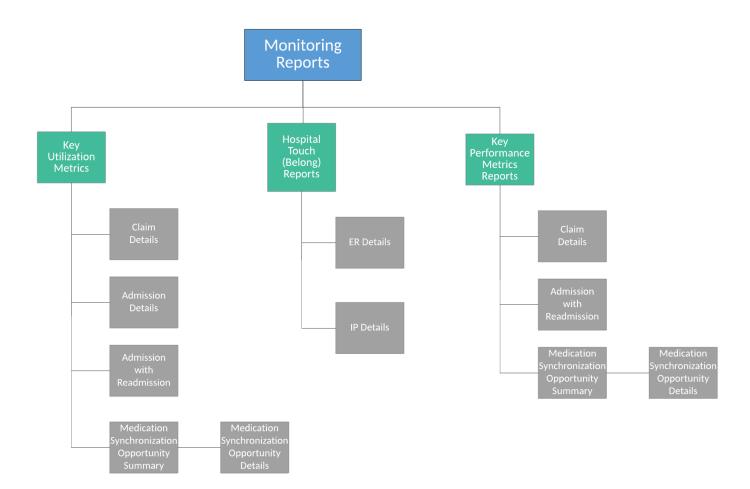

### 1.3.4 Pharmacy Analytics Report

The **Pharmacy Analytics** reports are accessible by clicking on **Pharmacy** from the main menu. The breakdown of the **Pharmacy Analytics** reports and the navigation paths are shown in the diagram below. The reports accessible from the main menu are represented by green, while the drill-through reports accessible from main are represented by grey. All reports under the sub-heading "Reports with Access to Patient-Level Detail" will direct the user to patient-level claims data in the Patient Summary and Patient Timeline.

### 1.3.5 Monitoring Reports

The **Monitoring Reports** are accessible by clicking on **Monitoring** from the main menu. The breakdown of the **Monitoring Reports** and the navigation paths are shown in the diagram below. The reports accessible from the main menu are represented by green, while the drill-through reports accessible from main are represented by grey.

### 2 INTRODUCTION TO MADE

### 2.1 MADE Home Page

The MADE home page provides an overview of all the available reports in the application.

This home page contains a main menu to the application's five modules, which includes:

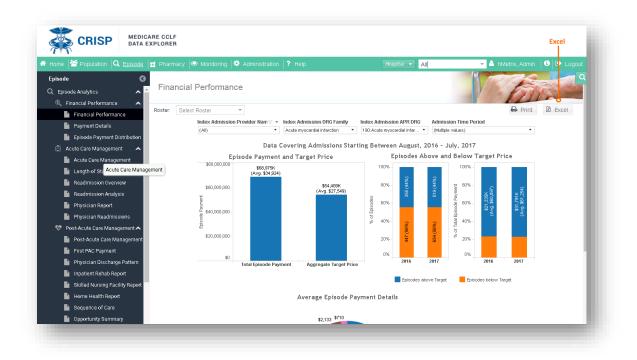

- Main Dashboard displays the Home page.
- **Population Analytics** displays the reports associated with Population Analytics. These reports are described in further detail in section 4- Population Analytics.
- **Episode Analytics** displays the reports associated with Episode Analytics. These reports are described in further detail in section 5- Episode Analytics.
- **Pharmacy Analytics** displays the reports associated with Pharmacy Analytics. These reports are described in further detail in section 6 Pharmacy Analytics.
- **Monitoring** displays the reports associated with Monitoring Reports. These reports are described in further detail in section 7 Monitoring Reports.
- Administration displays the reports associated with usage of the application. This section is only available to users who are part of CRISP Reporting Services and have an administrator role. For administration reports, refer to the Admin Guide.
- Help displays the downloadable User Manual and additional resources.

### 2.2 Common Functions

Exporting to PDF and Excel and Roster selection are available for all reports.

#### 2.2.1 Download an Excel Report

To download a report to Excel, click the **Excel** button in the upper right corner of the report. Clicking this button will download the Excel workbook to the download folder on your computer.

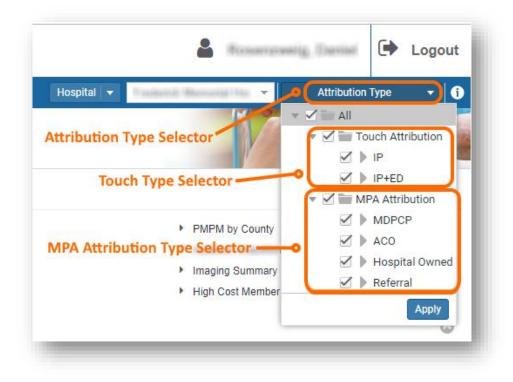

### 2.2.2 Export to PDF

To export a report to PDF, click the Print button in the upper right corner of the report. Clicking this button will show the PDF export menu. Click on the download button to download the PDF report to the download folder of your computer.

### 2.2.3 Attribution Type Selection

MADE allows for users to view patients attributed to their hospital using two different "touch" attribution methods as well as through Medicare Performance Adjustment (MPA) attribution methods. All attribution types are presented according to **OR** logic, such that all beneficiaries with any of multiple selected attribution types are shown. Simply select the desired attribution type(s) from the Attribution Type drop-down selector.

### 2.2.3.1 Touch Methodologies

Users can see patients attributed to their hospital based solely on inpatient hospitalizations (IP) or based on inpatient hospitalizations or emergency department visits (IP+ED) during the last 36 months. While data moving forward will be loaded into MADE based on the IP+ED algorithm, the IP attribution option allows hospitals to track a consistent panel of patients over time. The IP+ED selector is available for Episode reports. However, as by definition, all episodes begin with an inpatient hospitalization, so the ED attribution will not change the number of episodes initiated by the hospital.

Within Population Navigator, the column for Touch Attribution Type identifies the attribution method that captures a beneficiary - 'IP', "IP+ED", and 'Both'.

Beneficiaries with both an IP and ED 'touch' at the hospital, as described above, in the 36 months of CCLF data presented will have the value 'Both' indicated in the column, "Touch Attribution Type."

### 2.2.3.2 MPA Attribution Methodologies

MDPCP – Beneficiaries attributed to a hospital based on the beneficiaries attributed to physicians participating with the hospital-based Care Transformation Organization (CTO). Only hospitals acting as a CTO affiliated with MDPCP-participating practices will have this option.

ACO – Beneficiaries attributed under ACO-like methodology to physicians participating in a hospital-based ACO for hospitals participating in an ACO. Only hospitals with beneficiaries attributed to their ACO physicians will have this option.

Hospital Owned – Beneficiaries attributed to physicians on an employment list that the hospital was submitted to HSCRC. Beneficiaries are attributed to these physicians through the PCP-like MPA methodology.

Referral – These beneficiaries are attributed to physicians according to the PCP-like methodology and those physicians are attributed to hospitals based on the plurality of IP and OP visits for their attributed beneficiaries to a hospital. Only hospitals with submitted Care Coordination agreements with physicians who have beneficiaries attributed will have access to the CCLF for beneficiaries attributed through Referral.

Within Population Navigator, the column for MPA Attribution Type identifies the attribution method that captures a beneficiary – 'ACO', 'Hospital Owned', 'MDPCP," "Referral."

### 2.2.4 Roster Selection

You can filter any report based on any defined Roster.

PMPM by	Demogra	aphics						E	Real
ster: Select F	Roster							Print	Excel
			Claim Restricted to Non HMO and	<b>Summary</b> I Part A + Part B cover	age Members				
	Filter By	Acute Myocardial Infarction		(All)	•	Year	(All)		

### 2.2.5 Hospital / Hospital System Selection

For users with access to more than one hospital within a hospital system, you can filter any report based on an individual hospital, or a hospital system. Select "Hospital" or "Hospital System" from the drop down and choose the entity of interest.

Hospital / Hospital System Selector
Hospital 👻 All 🔍 🎍 hMetrix, Admin 🛛 🕄 🖙 Logout
a contraction of the second se

### 2.3 Provider Search

The Provider Search is a quick way to view prescriber or pharmacy information while viewing a report. The Provider Search icon is available on the top right-hand corner below the logout menu option. Select the Provider Type from the drop-down and then enter the Provider ID / or NPI into the field and the corresponding Provider information will be displayed in the grid below.

### 2.4 Session Timeout

To minimize unauthorized use of MADE, a user's session is set to time out after 30 minutes of inactivity. A warning message will be displayed 5 minutes before the session times out.

Warning!		
Your session w	ill Expire in 4 minutes, Do you want to continue?	
Yes	No	

If the user clicks **Yes** to the warning message, then the user's session will be active for another 30 minutes. If the user clicks **No** or does not respond to the warning message, the user's session will time out and the Session Timeout warning message will be displayed.

Session Timeout	- 1
Your session has timed out. Click OK to be re-directed to the CRISP login page.	- 1
ОК	

### **3 NON-PARTICIPATING HOSPITALS**

Hospitals who have not yet registered for the CCLF reports can access a subset of summary reports. From the MADE home page, click on the report name to view more details. Reports that are in dark blue are accessible to non-participating hospitals and reports in light blue require you to be registered with CRISP.

### 4 POPULATION ANALYTICS

The Population module includes the Population Navigator and Population Analytics reports. The Population Navigator provides a list of Patients enrolled in the program and specific Patient reports. The Population Navigator also includes the Patient Timeline, which graphically represents patient-specific care over time, and Patient Summary, which contains a series of patient-specific reports based on a series of diagnostic and utilization characteristics. The Population Analytics reports provides reports that aggregate the population based on series of variables. The Population module contains all health care utilization and payments for Part A and B Medicare services. Part D prescription drugs are included only in the Patient Navigator. The sections below provide further details on each section. For detailed information about the beneficiary and physician assignment methodology, as well as the data analyzed in MADE, refer to the topics in CCLF Data Basics titled Population Assignment and Physician Assignment.

### 4.1 Population Navigator

The Population Navigator provides a list of patients attributed to a hospital, patients enrolled in a program and patient-specific reports.

### 4.1.1 Population Navigator Column Filters

All column headers can be rearranged or changed by clicking on the column header. Each column header can be filtered using pre-set filters and sorted by ascending or descending order. Click on the column header to view the different filter options. To change the sequence of the table column headers, hold and drag the columns to the desired location. The **Attribution Type** column identifies the attribution method that captures each patient.

#### 4.1.2 User Defined Fields

The Population Navigator includes several fields that can be populated and edited by a user in MADE. To populate these variables, a user can upload a completed Roster Template. Otherwise, once already in a patient roster, double click and of the user defined variables for a specific patient to access a pop-up to edit available fields for a patient.

Edit			⊗
Physician NPI:	Physician:		
Custom ID:	Physician Practice:		
Patient Consent:	Date Of Consent:		
Case Manager Name:	CM Activity:		
Service Type:	Service Type Start Date:		
Ever Enrolled in Medicare Advantage:	Hospital Program Enrollment?		
ACO Beneficiary?:	Name of ACO:		
Criteria for Patient Roster Inclusion:	Other Risk Score:		\$
Nurse Practitioner:	Disenrollment Date:		
		Save	Cancel

Two User Defined fields, "Date of Consent" and "Disenrollment Date," are roster-specific entries. Patients may have multiples dates of consent across multiple entries. Entries into these fields will populate only with a roster loaded. These two fields are used to populate the **Key Performance Metrics Reports** within the Monitoring Module.

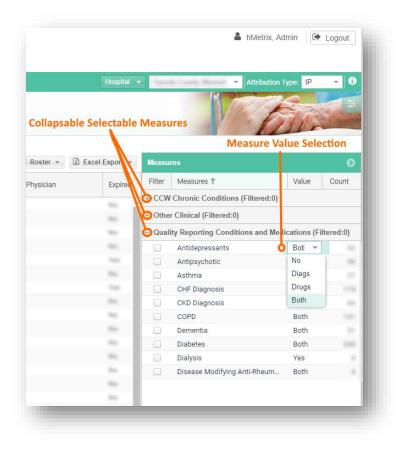

#### 4.1.3 Measures

The Population Navigator roster can be refined using the **Measures** filter. There are three measure categories - Measure categories:

- 1. CMS CCW Chronic Conditions based on CMS' algorithms for the standard chronic condition flags from Chronic Condition Warehouse
- 2. Other Clinical includes measures related to prescription drug use and associated payments
- 3. Quality Reporting Conditions and Medications includes conditions and medications frequently used when calculating quality measures across a population

Each category is expandable or collapsible using the '+' or '-' symbol on the title bar.

One or more measures can be added to or removed from the roster filter by clicking the checkbox. For each measure, select the value to filter by clicking on the **Value** dropdown options. Click on **Create Roster** to save your measure filters to easily access later.

#### 4.1.4 Create/Edit/Delete Roster

You can create, edit and delete a Roster easily from the Population Navigator page.

#### 4.1.4.1 Create a Roster

You can create a new roster by clicking on the **Roster >> Create** button.

	DATA EXPL	ORER					Create/	Edit or I	Delete a F	Roster
Home 😤 <u>Populati</u>	n 🔍 Episode 🖬 F	Pharmacy 🔍	Monitoring 🏼 🌣 A	dministration	? Help		Hospital 👻		🔒 hMetrix, A	dmin 🛛 🛈 🕞 Logou

Master Patient ID	Patient Name 🕆	Gender	000	-					II Delete	

There are four options to create and save a Roster:

#### 1. Roster based on measures

- a. Filter the Patient list by selecting your measures
- b. Click on Roster>> Create Roster
- c. Create a name for your roster
- d. On the Type, select Current View
- e. Click on **Create** button

#### 2. Roster for individual patients from the patient list

a. From the patient list, you can select one or more patients at a time. To select a group of patients, click on patients while holding the SHIFT key on a PC (or CMD on MAC). Patients can be selected individually by clicking on them while holding the CTRL key on a PC (or CMD on MAC). The selected patient names will be highlighted in green.

	Create Roster & Review Ca	ncel

#### 3. Upload a Roster

- a. Click on **Create Roster** button from the Population Navigator window, and the Create Roster window will be displayed.
- b. Enter the Roster name
- c. Select **Upload** from the Type options
- d. Click on **Download the Roster Template**
- e. The file will be saved to your computer
- f. Open the template, enter the values and save the file
- g. In the Create Roster dialogue, click on the Browse button and select the template file to upload
- h. Click on **Create** to save the roster
- i. The new roster will be displayed in the Population Navigator

			Create Roster	& Review Cancel

#### 4. Create a Roster Based on Other Existing Rosters

- a. Click on the **Combine Existing Rosters** tab from the Population Navigator window and the Create Roster window will be displayed.
- b. Enter the Roster name
- c. Select the Rosters and Set Operations needed from the options. Examples of set operators are:
  - Inion the combination of all patients across both rosters. For example, if Roster A contains patients X & Y and Roster B contains patients Y & Z, then Roster A Union Roster B contains patients X, Y & Z
  - ii. Intersect the common patients across both rosters. For example, if Roster A contains patients X & Y and Roster B contains patients Y & Z, then Roster A Intersect Roster B contains patients Y
  - iii. Complement the patients in one roster that are not represented in other rosters. For example, if Roster A contains patients X & Y and Roster B contains patients Y & Z, then Roster A Complement Roster B contains patients X. If the algorithm were reversed (Roster B Complement Roster A), the resulting roster would contain patients Z
  - iv. Brackets / Parenthesis are used to specify the order of operations
- d. Click on Create Roster & Review to view and save the roster
- e. The new roster will be displayed in the Population Navigator

Туре:	Selected Patient(s)	<ul> <li>Upload</li> </ul>
Make Public: 🌔		
Upload File:	roster_template.xlsx	Browse
		Download Template
		Create Roster & Review Cancel

#### 4.1.4.2 Edit a Roster

- 1. On the Population Navigator select the **Roster** name you wish to edit from the dropdown.
- 2. Click on the **Roster** button and select **Edit** from the options displayed.
- 3. Edit the name and click Edit Roster and Review button to view the patients and save your changes.

#### 4.1.4.3 Delete a Roster

- 1. On the Population Navigator select the **Roster** name you wish to delete from the dropdown.
- 2. Click on the Roster button and select **Delete** from the options displayed.
- 3. **Delete** the name and click Yes button to save your changes.

Confirmation	8
Do you want to delete th	is Roster?
Yes No	

#### 4.1.4.4 Excel Export

You can create an Excel export of the Population Navigator in two ways:

- 1. **Current View**: This view will create an Excel export for all selected patients identical to the columns seen in the User Interface
- 2. **Detail View**: This view will create an Excel export for all selected patients with all the available measures included as columns. All data columns available (even those hidden) will be included.

I Roster ▼	Excel Export
Measure	Current View
Count	Detail View

### 4.2 Patient Timeline

The **Patient Timeline** represents a patient's clinical history chronologically, visually and multi-dimensionally. The patient's clinical history is derived from claims data and other clinical data feeds. The patient timeline is accessible on the top right corner on all **Patient Summary** Reports. Click on the Patient Timeline icon displayed on the top right corner of the patient reports.

# 4.4 Population Analytics

The Population Analytics reports are described in further detail in this section. For detailed information on how the population assignments are determined in MADE, refer to the section in CCLF Data Basics titled "Population Assignment."

REPORT FUNCTIONS	DESCRIPTION
Report Name	The report name is always displayed on the left-hand corner. On the side menu
	click the report name to navigate across reports.
Report Header	Each report may contain subset reports. The header contains the report title and
(Chart Name)	a short description of the report.
Report Content	The report content area displays the results for the specific report header.
Report Filters	All reports can be filtered using several criteria and values.
	Choose from Filter By to view reports filtered on criteria such as member county,
	age, gender, disease type, high-cost indicators, etc.
	Select the Value Filter to further refine the filtered data by specific value (e.g.,
	Male within the Gender filter)
	Reports can also be filtered by time period (in years)
Filter Activation	Selects which value to include within the Report Filter using the Filter Value drop
	down.
Hospital Filters	The hospital filter displays a list of hospitals to view the population for all
	corresponding reports.
Print PDF	Click on the PDF button to export the report into a PDF format.
Excel Export	Click on the Excel button to export the report details into Excel workbook.

#### 4.4.1 PMPM by Demographics

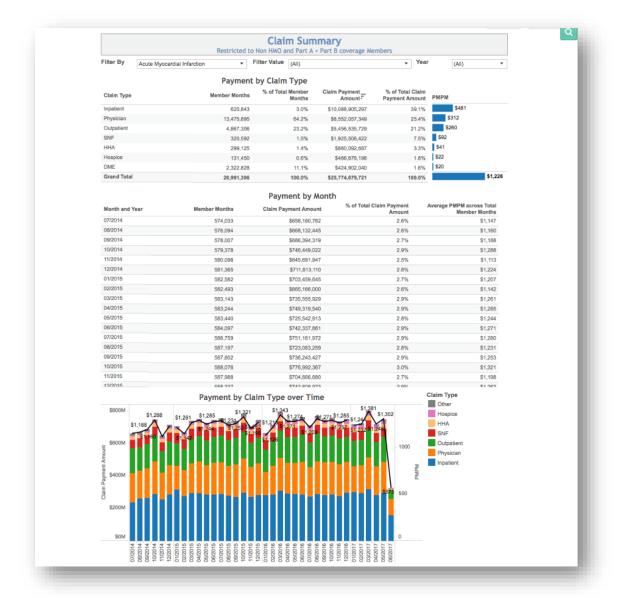

**PMPM by Demographics** illustrates the member count and payment information based on demographics such as race, gender, and age. This report shows:

#### 4.4.2 PMPM by Type of Service

**PMPM by Type of Service** contains details about the population by the type of service received. This report shows:

CHART NAME	DESCRIPTION
Payment by Claim Type	Lists the member month count, payment amounts, and average PMPM related to different types of services.
Payment by Month	Member count, payment amount, and average PMPM for each calendar month.
Payment by Claim Type over Time	Stacked bar chart showing the payment amounts for various types of service for each calendar month. The line chart shows the average PMPM for that month.

## 4.4.3 PMPM by County

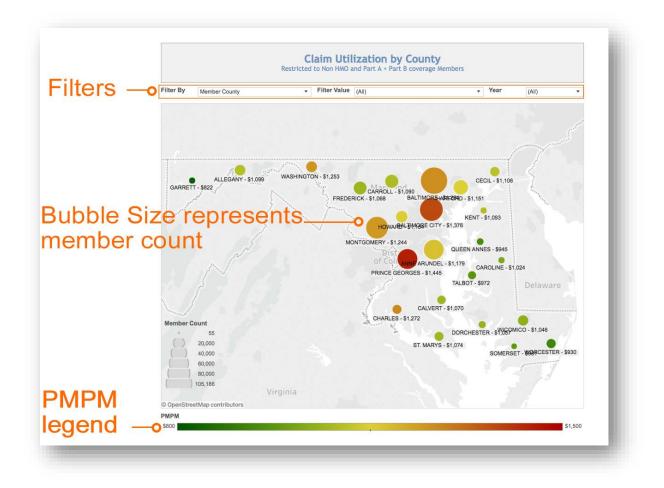

**PMPM by County** illustrates the distribution of member months, payment amount, and PMPM by county of residence. This report shows:

CHART NAME	DESCRIPTION
Claim Payment by County	Member month count, payment amount, and PMPM by county of residence.
Claim Payment by County	Bar chart listing the total claim payment amount by county of residency.

#### 4.4.4 County Distribution

**County Distribution** displays various details for each county. The color of the circle over each county represents the value (green indicates lower PMPM; red indicates higher PMPM) while the size of the circle represents the member count.

### 4.4.5 County Characteristics

**County Characteristics** provides details about the population in each county. Measures to split the population, represented as pie charts, by can be selected under the **Population Split by** dropdown. The size of the circles represents the member count.

#### 4.4.6 Diagnosis Summary

**Diagnosis Summary** presents the distribution of member count and payment amount for each diagnosis category. CCS Categories can be expanded or collapsed to change the level of detail presented.

#### 4.4.7 Inpatient Outpatient Providers

**Inpatient Outpatient Providers** displays the top 20 short term facilities and top 20 outpatient/ED providers from which the population received services (based on volume of services for the population selected) during the designated time period. These lists allow the user to identify the other top providers that are treating patients who are also treated at their facility. Outpatient/ED providers are defined by Part B outpatient claims (claim type 40). The report is sorted by claim payment amount and shows the payment amounts and average inpatient length of stay (LOS) for each provider.

#### 4.4.10 BETOS Summary

**BETOS Summary** displays the distribution of physician services, durable medical equipment, and outpatient services for the filtered population. These services are categorized using the BETOS classification and contains the claim line count, unit count and total payment amount for each BETOS. For further information on BETOS classification, refer to the Glossary in section 7.

### 4.4.12 Physician Specialty Summary

**Physician Specialty Summary** displays the physician claims by provider type and top 35 provider specialties by number of claim lines, payment amount and units. Provider type is categorized by a visit from a Primary Care Provider (PCP). A PCP visit is defined by a physician visit with the specialty of family practice or internal medicine.

# 5 EPISODE ANALYTICS

The Episode Analytics reports are described in further detail in this section. For detailed information on how episodes are constructed in MADE, refer to the topic in CCLF Data Basics titled "Episode."

Note: There is no attribution selector in Episode Analytics as all episodes must begin with an inpatient admission.

REPORT FUNCTIONS	DESCRIPTION					
Report Name	The report name is always displayed on the left-hand corner. On the side menu click the report name to navigate across reports.					
Report Header (Chart Name)	Each report may contain subset reports. The header contains the report title and a short description of the report.					
Report Content	The report content area displays the results for the specific report header.					
Report Filters	<ul> <li>All Episode reports can be filtered using several criteria and values.</li> <li>View the Episode reports using the following filters: <ul> <li>Index Admission Provider Name,</li> <li>Index Admission Index DRG family,</li> <li>Index Admission APR DRG</li> <li>Admission Time Period</li> </ul> </li> </ul>					
Print PDF	Click on the PDF button to export the report into a PDF format.					
Excel Export	Click on the Excel button to export the report details into Excel workbook.					

# 5.1 Financial Performance

**Financial Performance** compares the episode payment to the target price for the chosen APR DRG. These reports show:

CHART NAME	DESCRIPTION
Episode Payment and Target Price	Total average episode payment compared to the target.
Episodes Above and Below Target Price	The percent of episodes with total episode payments below and above the target price and the distribution of total dollars related to these episodes.
Average Episode Payment Details	The distribution of average payments for the entire episode by provider type.

#### 5.1.1 Payment Details

Payment Details provides greater detail about the episode payment distribution. This report shows:

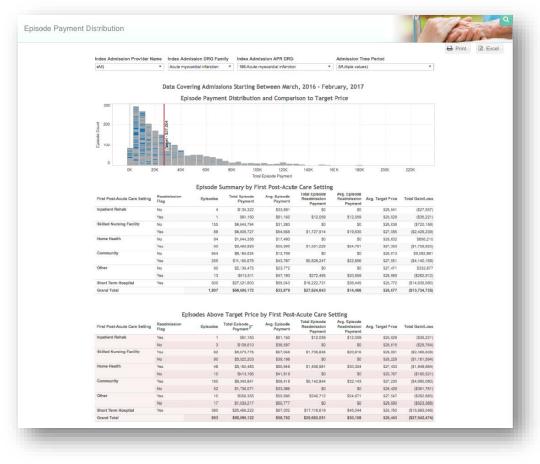

CHART NAME	DESCRIPTION
Episode Payment Summary	Presents the total number of episodes, average episode payment, and total episode payment for episodes above and below the target price.
Episode Payment Details	Compares the total and average episode payment by care setting for the filtered population to the overall state average.
Episode Payment Distribution – State Comparison	Compares the proportion the average episode payment for each care settings for the filtered population to that of the overall state average.

## 5.1.2 Episode Payment Distribution

**Episode Payment Distribution** displays the distribution of all episodes below and above the target price. This report shows:

CHART NAME	DESCRIPTION					
Episode Payment Distribution and Comparison to Target Price	Shows the distribution of episodes by total episode payment. Benchmark is provided for the Target Price. Each segment within each bar represents an episode.					
Episode Summary by First Post-Acute Setting	Provides a summary of total and average episode payments, readmissions rates and the total gain / loss compared to the target price based on the first post-acute care setting following discharge from the acute care hospital.					
Episodes Above Target Price by First Post-Acute Setting	For only episodes that exceed the target price, provides a summary of total and average episode payments, readmissions rates and the total gain / loss compared to the target price based on the first post-acute care setting following discharge from the acute care hospital.					

# 5.2 Acute Care Management

Acute Care Management contains performance measures related to the acute care setting. This report shows:

CHART NAME	DESCRIPTION
DRG Summary	The number of episodes, the average episode payments, number of readmissions, and average readmission payment for each APR DRG of the chosen family.
Index Admission LOS	Quarterly and annual average length of stay of the index admission.
Payment Comparison – Episodes w/ and w/o Readmission	Compares the payments by index admission, post-acute care and readmission components for episodes with and without readmissions.
Readmission Count Comparison	The number of readmissions back to your hospital versus a different hospital.
Readmission Rate Trend	Trends readmissions in total and where the readmission occurred.

## 5.2.1 Length of Stay

Length of Stay presents the length of stay for the APR DRG of the index admission. This report shows:

CHART NAME	DESCRIPTION
Distribution of Length of Stay(LOS) by APR DRG	Presents the distribution of the length of stay for the filtered APR DRG. Results are presented as a box and whisker plot.
Index Length of Stay (LOS) Trend	Shows the change in length of stay by quarter for the filtered APR DRG and time period.

	Index Admission DRG Family	Index Admission APR DRG	Admission Time Period	🖨 Print 🗟 Ex

#### 5.2.2 Readmission Overview

**Readmission Overview** provides the all-cause readmission rate by APR DRG and the associated average payment for episodes that contain an acute care hospital readmission. This report shows:

CHART NAME	DESCRIPTION
Overall Readmission Overview	Presents the proportion of episodes that contain an all-cause readmission and the average episode payment for those episodes. Also shows the average episode payment for episodes that are readmitted back to the index APR DRG acute care hospital versus those readmitted to a different hospital.
Readmission Rate and Average Readmission Payment by APR DRG	Presents the readmission rate and average readmission payment for the filtered APR DRG.
Readmission Rate	Shows the change in readmission rate by quarter for the filtered APR DRG and time period.

## 5.2.3 Readmission Analysis

**Readmission Analysis** provides the details of readmissions by readmission provider and responsible physician. This report shows:

TABLE NAME	DESCRIPTION
Readmission Analysis	Shows average episode payment, index APR DRG payment, readmission payment, and post-discharge episode payment by the episode readmission provider and the first post-acute care provider following discharge from the index hospitalization. Selecting a row in this table filters the Readmission Details table.
Readmission Details	Individual readmission information by responsible physician and readmission APR DRG.

## 5.2.4 Physician Report

**Physician Report** compares each of the top volume physicians. The blue bars indicate physicians with average payments/LOS/readmission rates above the overall average (across all physicians) and orange bars indicate physicians with averages below the overall average. This report shows:

CHART NAME	DESCRIPTION
Average LOS by Physician	Compares the average length of stay of the index admission APR DRG across physicians.
Average Payment per Episode by Physician	Compares the average episode payment across physicians.
Readmission Rate by Physician	Compares the episode readmission rate by physicians.
Physician Performance Report	Includes similar data from the above three charts for each physician along with the total number of episodes, the average physician payment, and the average readmission payment for each physician.

## 5.2.5 Physician Readmissions

**Physician Readmissions** identifies each readmission by readmission APR DRG and physician. This report provides the date of index admission discharge and readmission date, as well as the total episode payment, readmission payment and total post-discharge payment for each episode with a readmission.

## 5.3 Post-Acute Care Management

**Post-Acute Care Management** shows high-level information based on the discharge pattern from the index admission. This report shows:

CHART NAME	DESCRIPTION
Discharge Pattern from Index	Shows the index admission discharge pattern trends on a
Admission Trend	quarterly basis for the chosen time period.
Episode Discharge Pattern by First	Illustrates the percentage of episodes discharged by first post-
PAC Setting	acute care setting.
Avg. Post Discharge Payment by First	Provides the average post-discharge payment by first post-acute
PAC Setting	care setting.

## 5.3.1 First PAC Payment

**First PAC Payment** contains episode count and payment information based on the first discharge setting following discharge from the acute care hospital. This report shows:

CHART NAME	DESCRIPTION
First Post-Acute Setting Payment Report	Details the episode count, total episode payment, and total post-discharge payment by first post-acute care setting.
Episode Count by First Post-Acute Care Setting	Displays the number of episodes related to the first post-acute care setting.
Avg. Episode Payment by First Post- Acute Care Setting	Provides the average episode payment for each of the first post- acute care settings.

## 5.3.2 Physician Discharge Pattern

**Physician Discharge Pattern** compares physicians based on the post-acute care settings to which they discharge. This report shows:

CHART NAME	DESCRIPTION
Average Post-Discharge Payments	Shows the average post-discharge episode payment for each of the top volume physicians and overall. The blue bars indicate physician average post-discharge episode payments above the overall average and orange is below.
Discharge Pattern by Physician	Illustrates the discharge pattern for each of the top volume physicians by the percentage of discharges to each first post- acute care setting.
Post Physician Performance Report	Provides similar detail of the two charts above for each physician, including their episode volume.

## 5.3.3 Inpatient Rehabilitation Report

**Inpatient Rehabilitation Report** compares the top volume Inpatient Rehabilitation Facilities (IRF). The blue bars indicate IRFs with an average LOS, payment per episode and readmission rate, above the overall average and orange represents IRFs with averages below the overall. This report shows:

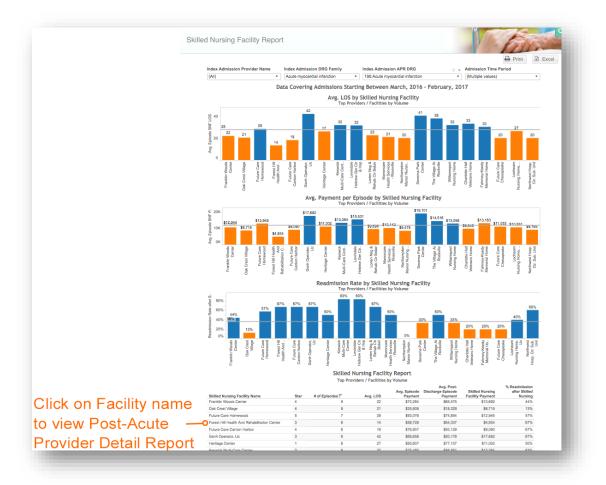

CHART NAME	DESCRIPTION
Avg. LOS by Inpatient Rehab Facility	Shows the average length of stay for the IRF admission for each of the top volume facilities.
Avg. Payment per Episode by Inpatient Rehab Facility	The average episode payment for each of the top volume facilities.
Readmission Rate by Inpatient Rehab Facility	The average readmission rate for each of the top volume facilities. Note that the readmissions are not necessarily from that specified facility; rather, the readmissions are during the 90-day post-discharge episode but are characterized by the first post-acute care setting facility.
Inpatient Rehab Facility Report	For each of the IRFs shown in the above charts, this table shows the number of episodes, average length of stay, and average episode payment.

#### 5.3.4 Skilled Nursing Facility Report

**Skilled Nursing Facility Report** compares the top volume Skilled Nursing Facilities (SNF). The blue bars indicate SNFs with an average LOS, payment per episode and readmission rate, above the overall average and orange represents SNFs with averages below the overall. This report shows:

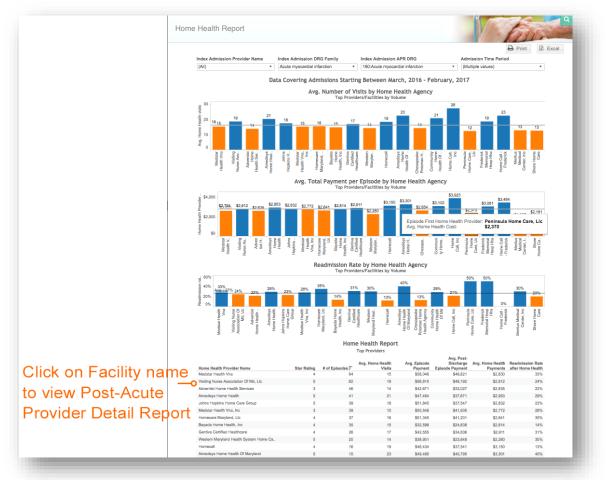

CHART NAME	DESCRIPTION
Avg. LOS by Skilled Nursing Facility	Shows the average length of stay for the IRF admission for each of the top volume facilities.
Avg. Payment per Episode by Skilled Nursing Facility	The average episode payment for each of the top volume facilities.
Readmission Rate by Skilled Nursing Facility	The average readmission rate for each of the top volume facilities. Note that the readmissions are not necessarily from that specified facility; rather, the readmissions are during the 90-day post-discharge episode but are characterized by the first post-acute care setting facility.
Skilled Nursing Facility Report	For each of the providers shown in the above charts, this table gives the number of episodes, average length of stay, and average episode payment.

#### 5.3.5 Home Health Report

**Home Health Report** compares the top volume Home Health Agencies (HHA). The blue bars indicate Home Health agencies with an average number of home health visits, payment per episode and readmission rate, above the overall average and orange represents HHAs with averages below the overall. This report shows:

CHART NAME	DESCRIPTION
Avg. Number of Visits by Home Health Agency	Shows the average number of visits for each of the top volume agencies.
Avg. Total Payment per Episode by Home Health Agency	The average episode payment for each of the top volume agencies.
Readmission Rate by Home Health Agency	The average readmission rate for each of the top volume agencies. Note that the readmissions are not necessarily from that specified agency; rather, the readmissions are during the 90-day post-discharge episode but are characterized by the first post-acute care setting agency.
Home Health Report	For each of the providers shown in the above charts, this table gives the number of episodes, average Home Health visits, and average episode payment.

#### 5.3.6 Sequence of Care

**Sequence of Care** illustrates the top 20 post-acute care sequences by volume. This report provides information regarding episode volume, total and average episode payments, and total and average post-discharge episode payments for each sequence. The provider types mentioned in this report include:

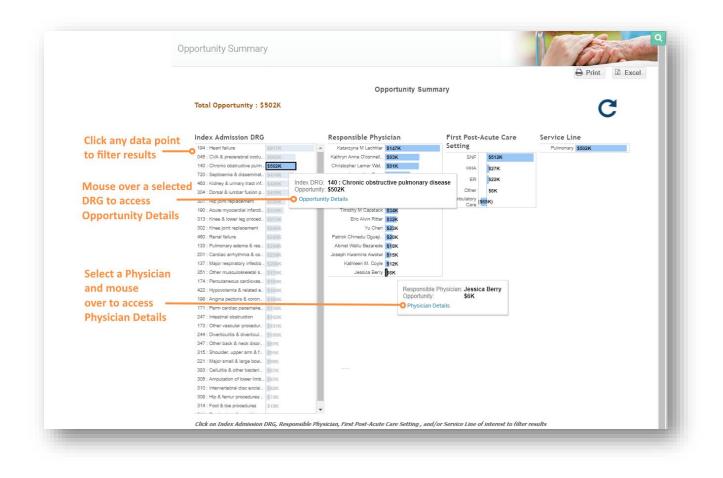

Provider Type	Provider Type Description
А	Short Term Hospital
1	Inpatient Rehabilitation Facility
S	Skilled Nursing Facility
Н	Home Health Agency
С	Community
E	Emergency Department Visit
Р	Outpatient Therapy
D	DME
L	Acute Long Term Care Hospital
Z	Other Inpatient Hospital
Т	Hospice

#### 5.3.7 Opportunity Summary

**Opportunity Summary** highlights the areas of savings opportunities within the hospital/system. This report does not support roster-specific analyses and will run using a hospital/system's entire attributed population based on a user-selected attribution method with segmentation by DRG, Physician, PAC Setting, and Service Line. Selecting any row will filter the remaining columns. This report includes:

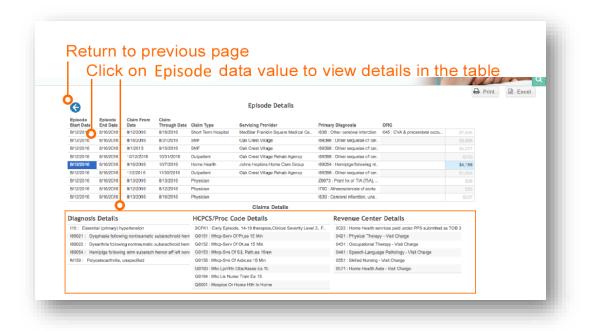

COLUMN NAME	DESCRIPTION
Index Admission DRG	Savings opportunity for each APR DRG of the index hospital admission.
Responsible Physician	Savings opportunities attributed to each responsible physician.
Discharge Provider Type	Savings opportunity attributed to each first post-acute care setting following discharge from the index hospital.
Service Line	Savings opportunity attributed to each service line associated with the APR DRG of the index hospital admission.

Selecting a DRG in the Opportunity Summary allows for a drill down to a report for the **Opportunity Details**. This report is the same as 5.3.8 Post-Acute Variance Explorer (PAVE) Savings Opportunity, filtered to the selected DRG. See 5.3.8 for information about this report.

#### 5.3.7.1 Episode Details

**Episode Details** lists every claim that occurred during the selected episode. Selecting any claim will populate the bottom table with the details of the selected claim.

## 5.3.8 Post-Acute Variance Explorer (PAVE) Savings Opportunity

**PAVE** uses hMetrix's proprietary technology to cluster groups of physicians based on similar practice patterns. This report does not support rosters and will run using a hospital's entire attributed population based on a user-selected attribution method for a selected DRG. This report includes:

CHART NAME	DESCRIPTION
Post-Acute Savings Opportunity Summary	Shows the savings opportunity for each APR DRG if the average post-discharge payments related to each physician were replaced with the average in the highest performing cluster.
Physician Cluster Summary	Provides a summary of the number of discharges, physicians and the average post-discharge episode payment in each cluster.
Discharge Pattern by Physician	Discharge patterns for each physician by percent of discharges to the first post-acute care setting.
Post-Discharge Payment by Physician	Illustrates the average post-discharge payment for each physician in a cluster and compares it to the average for the other clusters.
Highest Performing Cluster – Discharge Pattern	Represents the high performing cluster's average discharge pattern by percent of distribution.
Highest Performing Cluster – Payment Split	Represents the high performing cluster's average post-discharge payment and its spit between the different post-acute care settings.

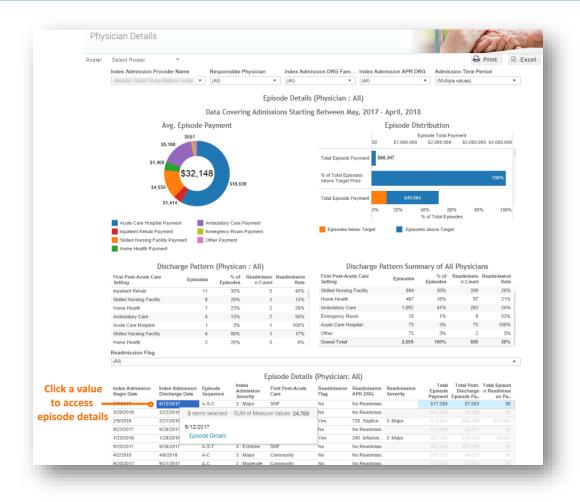

## 5.4 Drill-Down Analytics

#### 5.4.1 Physician Details

**Physician Details** shows the key episode metrics of a specified physician. This report shows:

CHART NAME	DESCRIPTION
Avg. Episode Payment	Shows the physician's average episode payments by setting.
Episode Distribution	Provides the distribution of episodes, by percent of total episodes and average episode payment, for those above and below the target price for the selected physician.
Discharge Pattern	Provides the distribution of first post-acute care setting and readmission rates for the selected physician. Selecting a row filters the Episode Details table for that setting.
Discharge Pattern Summary of All Physicians	Provides the distribution of first post-acute care setting and readmission rates for all physicians to allow for comparison.
Episode Details	Provides details on all episodes for the selected physician. Filtering can isolate only those episodes with readmissions.

#### 5.4.2 Post-Acute Provider Details

**Post-Acute Provider Details** shows the key episode metrics of a particular post-acute care provider. When accessed directly via the menu, this report will show all first PAC settings including settings that will not include provider information (Ambulatory Care, Acute Care Hospital, Emergency Room). This report shows:

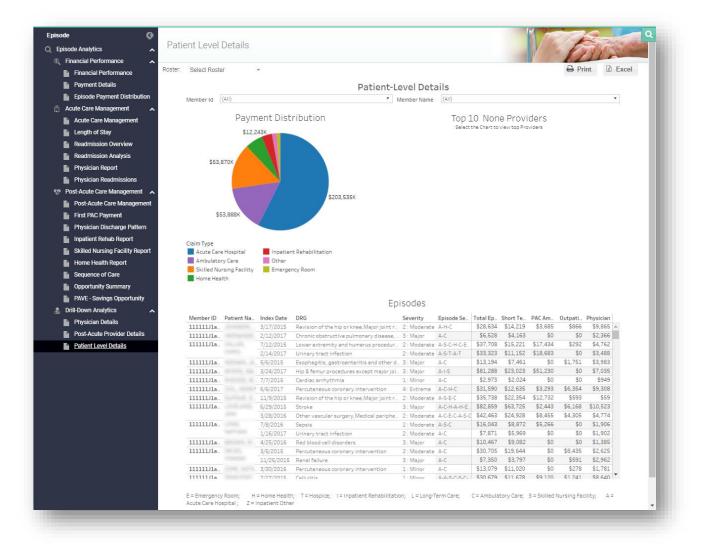

CHART NAME	DESCRIPTION
Post-Acute Provider Details	Details the number of episodes, readmissions, and episode payments related to the selected post-acute provider.
Post-Acute Provider Summary of All Providers	Details the number of episodes and episode payments related to all post-acute providers categorized by presence of a readmission.
Physician Discharge to All PAC	Identifies the physicians who discharged to the selected post- acute provider, along with the volume of episodes and episode payments.
Episode Details	Lists all episodes for the Post-Acute Provider

#### 5.4.3 Patient-Level Details

Patient-Level Details shows the key episode metrics of a particular patient. This report shows:

CHART NAME	DESCRIPTION
Payment Distribution	Provides the distribution of episode payment, for a patient or roster of patients by care setting.
Top 10 Providers	Provides the claim count and paid amount across episodes for the patient or roster of patients for the top 10 providers across all care settings.
Episodes	Provides details on all episodes for the selected patient or roster of patient including index APR DRG severity. Drill through accesses all patient claims during the episode

## 6 PHARMACY ANALYTICS

The Pharmacy module contains several reports that provide prescription drug utilization by volume, payment, high-risk medications, and top therapeutic category, among others. This module contains both detailed reports that allow for drill-through down to patient-level claims data, as well as summary reports. Pharmacy Analytics includes pharmacy utilization for Part B and D prescription drugs. For detailed information about the data sources used in this module, refer to the topic in CCLF Data Basics titled "CCLF".

## 6.1 Top 200 Drugs

Top 200 Drugs report outlines drugs (by drug name and brand/generic formulation) by claim count, ingredient cost, cost per claim, and average day supply. Click the drug name or BRAND/generic to populate the BRAND/generic Detail report. Hover over the Drug Name or Brand/generic to access the Top 200 Drugs Detail Report.

#### 6.2.1 High Risk Medications Prescriber Summary

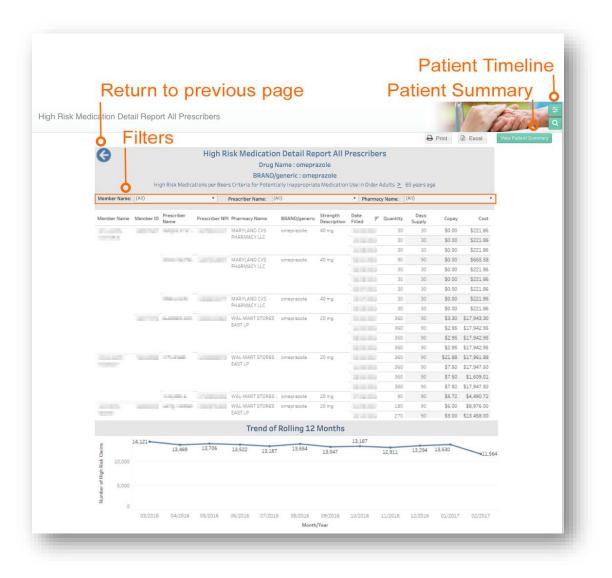

**High Risk Medication Prescriber Summary** lists the medications identified as potentially high risk according to Beers criteria for potentially inappropriate medication use in older adults (> 65 years of age or older) by selected Prescriber. The report lists the medication prescribed and corresponding claim count. To access this report, select the **High Risk Medication Top 100 Prescribers** and click on the Provider Name. Click on the Drug Name or BRAND/generic to view the **High Risk Medication Detail Report by Prescriber** and **High Risk Medication Detail Claims Report**. Patient-level claims information is available by clicking on Patient Summary and Patient Timeline.

#### 6.2.2 High Risk Medication Detail Report All Prescribers

**High Risk Medication Detail Report All Prescribers** report provides detailed claims information for all prescribers for the selected high-risk medication. The report can be sorted by member name, prescriber name, pharmacy name, among other fields. The trend graph illustrates the number of claims for specified drug across all prescribers by month.

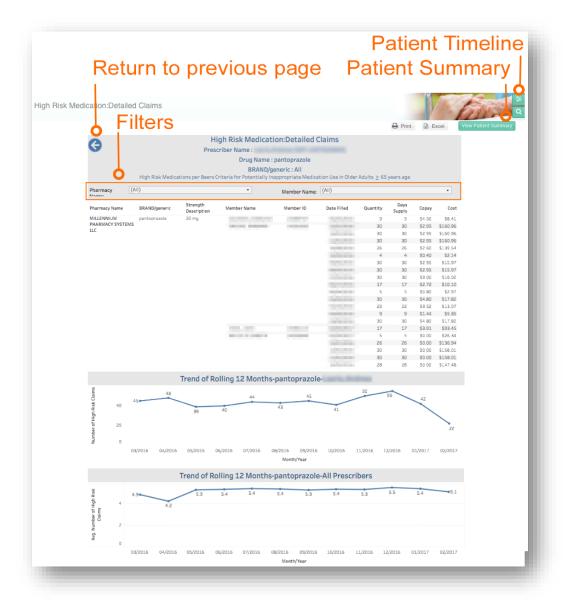

To access this report, select a drug name from the **High-Risk Medications Prescriber Summary** report and click on the **High Risk Medication Detail Report All Prescribers**. Patient-level claims information is available by clicking on Patient Summary and Patient Timeline. Click the back button to return the previous report.

#### 6.2.3 High Risk Medication Detailed Claim by Prescriber

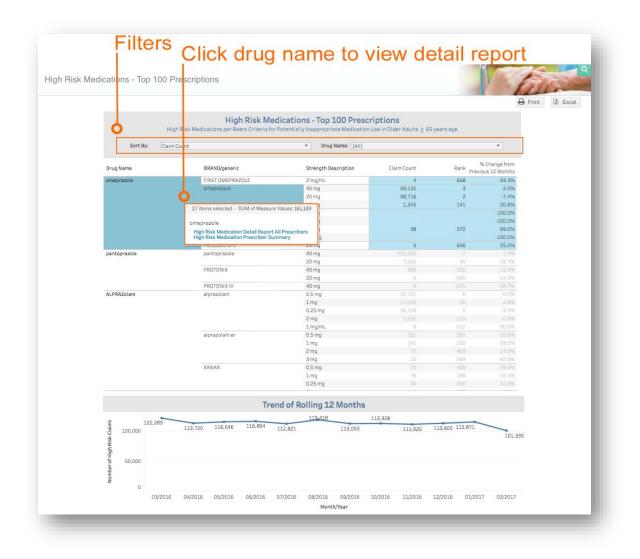

**High Risk Medication Detailed Claim by Prescriber** report provides detail claims information for a specific highrisk medication and prescriber including the Pharmacy name, Member Name, date filled, ingredient cost, and patient copayment. The first trend graph illustrates the number of claims for specified drug prescribed by the selected prescriber for the last 12 months. The second trend graph illustrates the average number of claims for the same drug across all prescribers by month.

To access this report, select a drug from the **High-Risk Medications Prescriber Summary** report click on the **High Risk Medications Detailed Claim by Prescriber** report. Patient-level claims information is available by clicking on Patient Summary and Patient Timeline. Click on the back button to return to the previous report.

## 6.3 High-Risk Medications – Top 100 Prescriptions

**High-Risk Medications – Top 100 Prescriptions** report displays top 100 high-risk medications identified as potentially high-risk according to Beers criteria for potentially inappropriate medication use in older adults (> 65 years of age or older). This report contains the drug name, brand/generic formulation, strength, claim count and percent change in claim count from previous 12 months. The trend graph illustrates the number of claims across the top 100 high-risk medications by month.

From this report, select a drug to access the **High Risk Medications Prescriber Summary** report. From this Summary Report, additional information can be access in the **High Risk Medications Detail Report All Prescribers** and **High Risk Medication Detailed Claim by Prescriber** reports. Click on the back button to return to the previous report.

## 6.4 Top 10 Therapeutic Categories: Rolling 12 Months

**Top 10 Therapeutic Categories** report provides a list of therapeutic categories and subcategories with corresponding claim count and cost. Click on the therapeutic category to view more detailed reports.

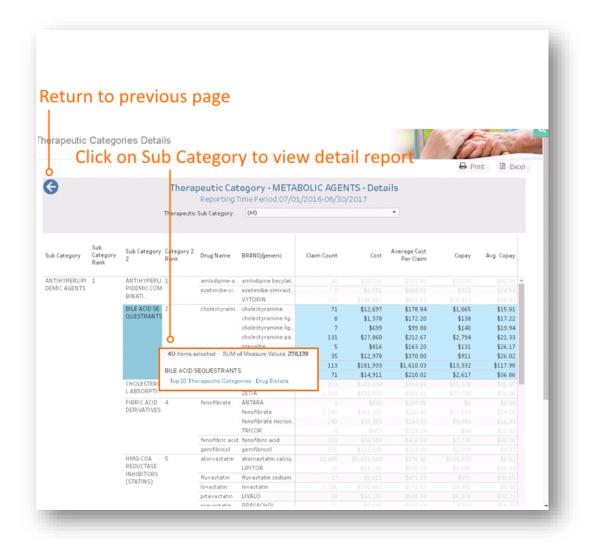

#### 6.4.1 Top Ten Therapeutic Categories: BRAND/Generic Utilization

**Top Ten Therapeutic Categories: BRAND/Generic Utilization** report presents the claim counts and cost information for each of the top 10 therapeutic categories, divided by brand and generic formulations. The proportion of all drugs prescribed within a therapeutic category by brand and generic formulation is presented in the chart. This report contains sub-reports that provide detail at the drug Category, Sub Category, Sub Category 2, and Drug Name level. To access this report, select the category or subcategory from **Top Ten Categories Rolling 12 Month report.** Additional drill-throughs are available until the Drug Name level. At that point, click on Patient Summary or Timeline to view patient-level information.

#### 6.4.2 Top Ten Therapeutic Category: [Drug Name] Details

**Therapeutic Category Details** report presents detailed claim information for the selected therapeutic category including cost, claim count, and copay information. To access this report, select the category or subcategory from **Top Ten Categories Rolling 12 Month** report.

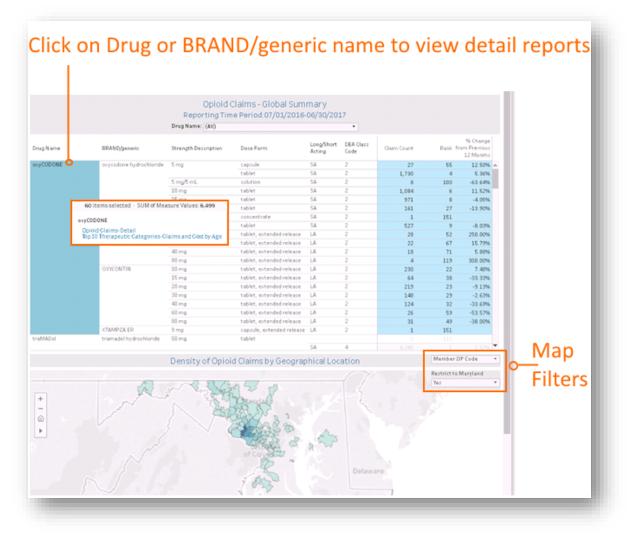

## 6.4.3 Top Ten Therapeutic Categories: Claims and Cost by Age

Top Ten Therapeutic Categories: Claims and Cost Age report presents the claim counts and cost for each therapeutic category, divided by patient age category. The claim count and cost of the drug by age category is shown in the chart. To access this report, select the category or subcategory from Top Ten Categories Rolling 12 Month report.

## 6.8 Prescription Activity Report

**Prescription Activity Report** provides a summary of cost and utilization for all claims categorized by Part D and Part B. Variables of interest include the count of brand and generic drugs (for Part D), utilization measures such as average volume and day supply, and cost measures such as average PMPM for ingredient cost and patient copayment. The pie charts show the distribution of claims and medication cost by Part B and Part D drug, as well as number of Part D claims by brand and generic formulation, and proportion of high-risk and non-high-risk drugs dispensed.

# 6.9 Top Ten Therapeutic Categories - BRAND/Generic Utilization Summary

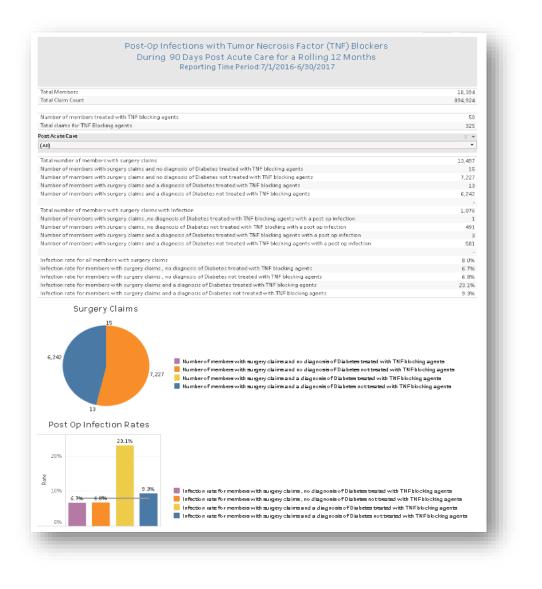

**Top Ten Therapeutic Categories – BRAND/ Generic Utilization Summary** report presents the claim counts and cost information for each of the top 10 therapeutic categories, divided by brand and generic formulations. The proportion of all drugs prescribed within a therapeutic category by brand and generic formulation is presented in the chart.

# 6.10 Post-Op Infections and Surgery Rates with Tumor Necrosis Factor (TNF) Blockers

**Post –Op Infections with TNF Blockers** is a summary report of the post-operative infection rate and surgery claims during the 90-day post-discharge episode period. The report compares patients treated (and not treated) with TNF blockers; patients treated with TNF blocker with also a diagnosis (or no diagnosis) of diabetes; and patients with a diagnosis of diabetes who have not been treated with TNF blockers. For the population groups the following information is reported:

- Total number of Members with surgery claims
- Total number of Members with surgery claims with infection
- Infection rates for all Members with surgery claims

## 7 MONITORING REPORTS

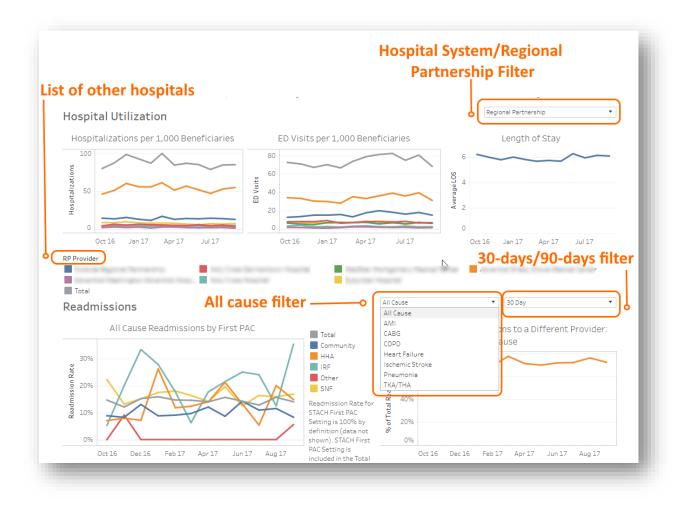

The Monitoring Report module contains two reports to enable hospital users to track overall utilization and spending trends across patient rosters and to more accurately identify patients under the care of their hospital.

## 7.1 Key Utilization Metrics Report

**Key Utilization Metrics Report** presents the historical trends in key utilization metrics including Medicare allowed payments (total and per-member-per-month), hospital utilization (admissions and ER visits per 1,000 beneficiaries and LOS) hospital readmissions, and care management. This report can be customized by selecting the roster of patients to analyze, the number of historical months to report (up to 12 months) and whether the report includes the last two months of claims where incomplete data may be presented (due to claim processing lag).

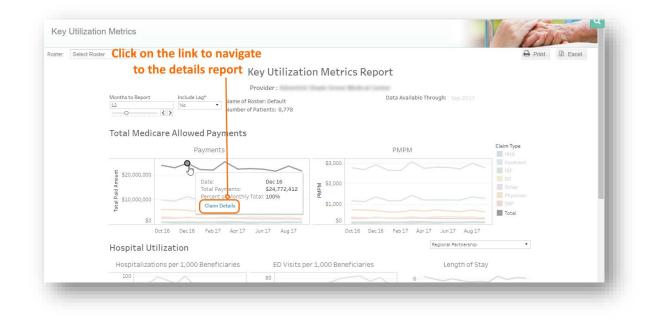

For the attributed patients in the selected roster, the Readmissions section can show the hospitalization rates at the other hospitals within the Regional Partnership or the Hospital System. The readmission section can show all-cause readmissions, or seven conditions included in the readmissions reduction incentive program (RRIP) for either 30-days or 90-days.

Patient-level details are available within the payment, utilization, or readmission panels:

- Click a data point on any line of the Payments or PMPM graphs to display **Claim Details** for the care setting of interest.
- Click a data point on any line of the Hospitalizations per 1,000 Beneficiaries or ED Visits per 1,000 Beneficiaries graphs to display **Admission Details** for the hospital of interest.
- Click a data point on any line of the Readmissions by First PAC graph to display Admissions with **Readmissions** for the first PAC setting of interest.

Within the Medication Synchronization Opportunity graph, clicking on a data point and selecting **Medication Sync Details** will direct the user to the **Medication Synchronization Opportunity Summary**, also available through the Pharmacy module.

#### 7.1.1 Claim Details and Admission Details

**Claim Details** provides claim-level details by care setting. Click on the Claim Type drop down to select the care setting of interest. This report shows every claim, including claim from and through dates, primary diagnosis, total payments, and LOS and APR DRG (if relevant) for the selected care setting and patient roster. Report can be downloaded to Excel or printed to PDF.

#### 7.1.2 Admissions with Readmission

Admission with Readmission provides claim-level details for acute care hospitalizations that preceded readmissions within 30 or 90 days (as selected in the base report). This report shows every admission, including index acute care hospitals, APR DRG, claim from and through dates, LOS, primary diagnosis, and total payments for the selected patient roster. Report can be downloaded to Excel or printed to PDF.

#### 7.1.3 Medication Synchronization Details

**Medication Synchronization Details,** mirrors the full report contained in the Pharmacy Module, the pharmacies by number and proportion of patients who did not receive medication reconciliation. Click on **Medication Synchronization Opportunity Detail** to access patient-level details.

## 7.1.3.1 Medication Synchronization Opportunity Detail

Medication Synchronization Opportunity Detail report lists patients who have not received medication synchronization, or have their prescriptions filled on multiple dates each month or every three months using multiple pharmacies. To access this report, click on the Pharmacy Name from the Medication Synchronization Opportunity Summary. Click on Patient Summary and Patient Timeline to access patient-level detail.

# 7.2 Key Performance Metrics Report – Population Health

**ADVISORY:** The **Key Performance Metrics Report – Population Health** can only be generated for a roster that has the user editable field 'Date of Consent' populated for patients. Patients without a date populated are assumed to not yet be receiving the program intervention. The 'Date of Consent' field is used as a proxy for the start of a patient receiving the intervention. 'Disenrollment Date' is used as a proxy for the end of a patient receiving the intervention.

**Key Performance Metrics Report – Population Health** (KPMR-PH) shows trends for a population that includes both patients who are enrolled (assumed to be actively receiving a program intervention) and patients who are eligible but not yet receiving (enrolled in) the intervention. While the population is presented overall, the tool tip within each chart shows the utilization for each sub-population separately.

CHART NAME	DESCRIPTION	DRILL DOWN CAPABILITY
PMPM	Average per member per month payments by Claim Type	Drill down to Claim Details
Roster Churn	The influx and outflux of patients receiving intervention in the roster over time	No Drill Down reporting
Hospitalizations per 1,000 Beneficiaries	Admissions to Short-term Acute Care Hospitals either within the Hospital System or Regional Partnership, according to chart filter selection	Drill down to Claim Details
Length of Stay	Per month average length of stay at the index hospital	No Drill Down reporting
ED visits per 1,0000	ED admissions to Short-term Acute Care Hospitals	Drill down to Claim Details
Beneficiaries	either within the Hospital System or Regional Partnership according to chart filter selection	
All Cause	Readmission rates by month for patients discharged	Drill down to Admissions
Readmissions by First PAC	from your STACH grouped by their first PAC setting	with Readmission
Percent of Total Readmissions to a Different Provider: (All Cause)	The percent of patients readmitted to a hospital different from the index hospital. Readmissions can be identified using either an All Cause definition or filtered by conditions included in the Readmission Reduction Incentive Program (RRIP). A filter for 30 or 90-day readmissions can also be applied.	No Drill Down reporting
CRISP In Context Alerts	Count of patients who accessed In Context Alerts by alert type by month. Number of alerts are calculated on a per patient, per hospital, per day basis.	No Drill Down reporting
Physician Visits per 1,000 Beneficiaries	Counts of physician visits per 1,000 beneficiaries	No Drill Down reporting
Medication Synchronization Opportunity	The percent of patients per month who are eligible for medication synchronization. Asynchronization is identified as patients who fill prescriptions on multiple days in a month and/or at multiple pharmacies	Drill down to Medication Synchronization Opportunity Summary

#### 7.2.1 Report Filters

**Selected Roster:** KPMR-PH will not load without selecting a roster. This roster should include all patients that fit enrollment criteria for an intervention, i.e. both those that are enrolled, as well as any that are eligible to be enrolled in the future.

**Intervention Filter:** Filters the report to limit the utilization data to patients either enrolled in the program or not enrolled in the program. The selection of "Intervention" will limit the data displayed to claims that occurred after patients' dates of consent and before patients' dates of disenrollment, if present. If a patient has a date of consent but not disenrollment date, all claims after the patient's date of consent are displayed. The selection of "No Intervention" will only include the claims prior to the date of consent or after the disenrollment date.

Lag Filter: Include or exclude the most recent two calendar months' claims, which are considered incomplete due to lags in claim payment and processing.

Roster Properties: Provides summary information regarding the selected roster.

- 1. Provider: Hospital Name
- 2. Roster Name: Label of the selected roster.
- 3. Number of Patients Currently Enrolled: The number of patients with dates of consent and no disenrollment date present within the selected roster.
- 4. Number of Patients Enrolled: The count of patients in the roster that have a date of consent with no exclusion for disenrollment.
- 5. Number of Patients in Roster: The total count of patients in the roster, including expired and disenrolled patients.

**Outliers and Non-Impactable Events Filter:** This filter allows exclusion of patients with claims outside the 95<sup>th</sup> percentile of claims (Outliers) and/or for claims for conditions that are not likely to be affected by care management (Non-Impactable).

**Program Impact Filter:** To limit the report to utilization trends directly attributed to the program intervention, utilization data for patients enrolled in the program for fewer than 3 months are excluded by default. This exclusion aims to address regression to the mean concerns and the typical ramp-up for impacting care through program interventions. Users may elect to show all available data or extend the exclusion to 6 months.

**Program Start Line Date**: This manually entered date will present in charts as a labeled vertical line to indicate the start of an intervention or program. It does not affect how utilization trends are calculated.

#### 7.2.2 Claim Details

The **Claim Details** drill down is accessible through the Total Medicare Allowed Payments, Hospitalizations or ED Visits per 1,000 Beneficiaries, and All Cause Readmissions by First PAC charts. It shows individual claims at the patient level with columns indicating the Claim Type, Member ID, Last Name, First Name, Provider Name, Claim From Date, Claim Through Date, Length of Stay (LOS), APR DRG, Primary Diagnosis, and Total Payments. Additionally, there is a filter to exclude Outliers, Non-Impactable Events, or both. Mouse over any row for additional information via a tooltip.

When navigating the **Claim Details** drill down, use the blue arrow to return to KPMR-PH. Your browser's back button will not bring you the previously viewed report.

## 7.2.3 Admissions with Readmission

Having selected a point in the All Cause Readmissions by First PAC report, and mousing over that data point, a link labeled, Admissions With Readmission, will direct to a report with claims data regarding patients' readmissions to all settings with a filter to limit readmissions by care setting. The Admissions with Readmission detail report shows total payments per patient per readmission including the primary diagnosis and related APR DRG. Mousing over a specific row in this report will yield a tooltip with information regarding the claim.

Admissions with Readmission provides claim-level details for acute care hospitalizations that preceded readmissions within 30 or 90 days (as selected in the base report). This report shows every readmission, including index acute care hospital, APR DRG, claim from and through dates, LOS, primary diagnosis, and total payments for the selected patient roster.

### 7.2.4 Medication Synchronization Opportunity Summary

**Medication Synchronization Opportunity Summary** ranks the pharmacies by number and proportion of patients who did not receive medication reconciliation. Click on **Medication Synchronization Opportunity Detail** to access patient-level details.

, i i	<b>Opportur</b> June 2017	
% Out of Sync Patients	Sync Patients	Days Supply
		30.0
	detail 💷	
74.4%	32	43.7
		47.1
	1	
ND LLC	T OF MARY

9.2%) (83.3%) (84.8%) 45 55 56	0) (79.7%) 51	(77.1%) 54
8/2018 04/2018 05/2018	8 02/2018	07/2018
45	51	55 56 58

The **Medication Synchronization Opportunity Summary** report lists pharmacies with the number of patients that fill prescriptions there, the number of those patients that are out of sync, the percentage of out of sync patients, and the average supply in days of filled prescriptions. Selecting a pharmacy will populate a graph at the bottom of the report that depicts the percentage of out of sync patients for the previous 12-months of claims. Mousing over a selected pharmacy will yield a tooltip with a link to the **Medication Synchronization Opportunity Detail** report.

The **Medication Synchronization Opportunity Detail** report (KPMR – PH – MSOD) lists patients who have not received medication synchronization, or have their prescriptions filled on multiple dates each month or every three months using multiple pharmacies. To access this report, click on the Pharmacy Name from the **Medication Synchronization Opportunity Summary**.

# 7.3 Key Performance Metrics Report – Indexed Enrollment

**ADVISORY:** The **Key Performance Metrics Report – Indexed Enrollment** can only be generated for a roster that has the user editable field 'Date of Consent' populated for patients. Patients without a date populated are assumed to not yet be receiving the program intervention. The 'Date of Consent' field is used as a proxy for the start of a patient receiving the intervention.

**Key Performance Metrics Report – Indexed Enrollment** (KPMR-IE) shows utilization trends for patients once they are enrolled to receive a program intervention. Unlike in KPMR-PH, *only patients with a corresponding 'Date of Consent' are depicted*, and all "Dates of Consent" are all indexed to month "0." Indexing all enrolled patients to month "0" allows for a direct review of an intervention's impact on a population receiving an intervention.

CHART NAME	DESCRIPTION	DRILL DOWN CAPABILITY
PMPM	Average per member per month payments by Claim Type	Drill down to Claim Details
Roster Churn	The influx and outflux of patients receiving intervention in the roster over time (Non-indexed)	No Drill Down reporting
Hospitalizations per 1,000 Beneficiaries	Admissions to Short-term Acute Care Hospitals either within the Hospital System or Regional Partnership, according to chart filter selection	Drill down to Claim Details
Length of Stay	Per month average length of stay at the index hospital	No Drill Down reporting
ED visits per 1,0000 Beneficiaries	ED admissions to Short-term Acute Care Hospitals either within the Hospital System or Regional Partnership according to chart filter selection	Drill down to Claim Details
All Cause	Readmission rates by month for patients discharged	Drill down to Admissions
Readmissions by First PAC	from your STACH grouped by their first PAC setting	with Readmission
Percent of Total Readmissions to a Different Provider: (All Cause)	The percent of patients readmitted to a hospital different from the index hospital. Readmissions can be identified using either as All Cause definition or filtered by conditions included in the Readmission Reduction Incentive Program (RRIP). A filter for 30 or 90-day readmissions can also be applied.	No Drill Down reporting
CRISP In Context Alerts	Count of patients who accessed In Context Alerts by alert type by month. Number of alerts are calculated on a per patient, per hospital, per day basis.	No Drill Down reporting
Physician Visits per 1,000 Beneficiaries	Counts of physician visits per 1,000 beneficiaries	No Drill Down reporting
Medication Synchronization Opportunity	The percent of patients per month who are eligible for medication synchronization. Asynchronization is identified as patients who fill prescriptions on multiple days in a month and/or at multiple pharmacies	Drill down to Medication Synchronization Opportunity Summary

#### 7.3.1 Report Filters

Several Report filters are available to customize the report.

**Selected Roster:** KPMR-IE will not load without selecting a roster. This roster may include all patients that fit enrollment criteria for an intervention, i.e. both those that are enrolled, as well as any that are eligible to be enrolled in the future. However, only patients with "Date of Consent" populated will be depicted in KPMR-IE.

Lag Filter: Include or exclude the most recent two calendar months' claims, which are considered incomplete due to lags in claim payment.

Roster Properties: Provides summary information regarding the selected roster.

- 1. Provider: Hospital Name
- 2. Roster Name: Label of the selected roster.
- 3. Number of Patients Currently Enrolled: The number of patients with dates of consent and no date of disenrollment present within the selected roster.
- 4. Number of Patients Enrolled: The count of patients in the roster that have a date of consent with no exclusion for disenrollment.
- 5. Number of Patients in Roster: The total count of patients in the roster, including expired and disenrolled patients.

**Outliers and Non-Impactable Events Filter:** This filter allows exclusion of patients with claims outside the 95<sup>th</sup> percentile of claims (Outliers) and/or for claims for conditions that are not likely to be affected by care management (Non-Impactable).

**Program Impact Filter:** To limit the report to utilization trends directly attributed to the program intervention, utilization data for patients enrolled in the program for fewer than 3 months are excluded by default. This exclusion aims to address regression to the mean concerns and the typical ramp-up for impacting care through program interventions. Users may elect to show all available data or extend the exclusion to 6 months.

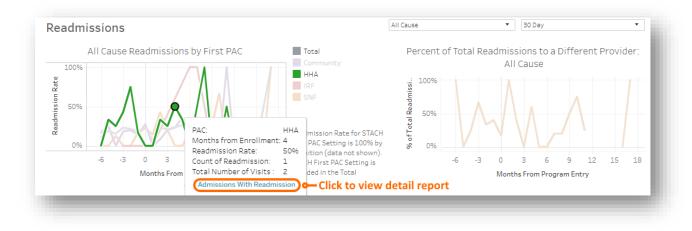

## 7.3.2 Claim Details

The **Claim Details** drill down is accessible through the Total Medicare Allowed Payments, Hospitalizations or ED Visits per 1,000 Beneficiaries, and All Cause Readmissions by First PAC charts, and it shows individual claims at the patient level with columns indicating the Claim Type, Member ID, Last Name, First Name, Provider Name, Claim From Date, Claim Through Date, Length of Stay (LOS), APR DRG, Primary Diagnosis, and Total Payments. Additionally, there is a filter to exclude Outliers, Non-Impactable Events, or both. Mouse over any row for additional information via a tooltip. The **Claim Details** drill down maintains the indexing from the previous view. In the screenshot below, each claim occurred the same number of months following a patient's indicated 'Date of Consent' in the roster. Mouse over a Total Payments value to view the **Tooltip**.

When navigating the **Claims Details** drill down, use the blue arrow to return to KPMR-IE. Your browser's back button will not bring you the previously viewed report.

## 7.3.3 Admissions with Readmission

Having selected a point in the All Cause Readmissions by First PAC chart, and mousing over that data point, a link labeled Admissions With Readmission will direct to a report with claims data regarding patients' readmissions to all settings with a filter to limit readmissions by care setting. The Admissions with Readmission detail report shows total payments per patient per readmission including the primary diagnosis and related APR DRG. Mousing over a specific row in this report will yield a tooltip with information regarding the claim.

Admission with Readmission provides claim-level details for acute care hospitalizations that preceded readmissions within 30 or 90 days (as selected in the base report). This report shows every readmission, including index acute care hospital, APR DRG, claim from and through dates, LOS, primary diagnosis, and total payments for the selected patient roster. Report can be downloaded to Excel or printed.

## 7.3.4 Medication Synchronization Opportunity Summary

**Medication Synchronization Opportunity Summary** ranks the pharmacies by number and proportion of patients who did not receive medication reconciliation. Click on **Medication Synchronization Opportunity Detail** to access patient-level details.

The **Medication Synchronization Opportunity Summary** report lists pharmacies with the number of patients who fill prescriptions there, the number of those patients who are out of sync, the percentage of patients who are out of sync, and the average supply in days of filled prescriptions. Selecting a pharmacy will populate a graph at the bottom of the report that depicts the percentage of out of sync patients for the previous 12-months of claims. Mousing over a selected pharmacy will yield a tooltip with a link to the **Medication Synchronization Opportunity Detail** report.

The **Medication Synchronization Opportunity Detail** report (KPMR - IE - MSOD) lists patients who have not received medication synchronization, or have their prescriptions filled on multiple dates each month or every three months using multiple pharmacies. To access this report, click on the Pharmacy Name from the **Medication Synchronization Opportunity Summary**.

# 7.4 Hospital Touch (Belong) Report

**Hospital Touch (Belong) Report** presents the number and location of historical short-term acute care hospital (STACH) admissions and ER visits for a roster of interest. The goal of the report is to help hospitals identify patients who "belong" to the attributed hospital, based on historical admission patterns. That is, while a patient is attributed to every hospital to which he/she is admitted, that hospital may not be the predominate provider of care. This report helps hospital users identify which patients may be most suitable for care management, as the patient heavily relies on their services. Additionally, users can change the attribution method from 'IP' to 'IP+ED' to capture patients that were attributed by use of a hospital's emergency department.

Using sliding scales, the user can isolate patients who have above a threshold percentage of their STACH or ER visits at the hospital of interest. Users can then download the list to Excel, print to PDF or save the patient list as a roster for further reporting. Click on a data point and hover briefly over a given patient to access IP Details and ER Details for each admission/visit.

# 7.5 SNF Utilization Reports

The SNF Utilization Reports present reported and risk-adjusted SNF utilization for Medicare beneficiaries discharged from a given acute care hospital and immediately (within 3 days) admitted to a SNF. The goal of the report is to present select quality indicators for the SNF including the 30-day readmission rate back to an acute care hospital (within 30-days from discharge from the initial acute care hospital), length of stay in the SNF, and SNF payment.

Comparing reported values are misleading as the complexity and severity of patients differ across SNFs. This report risk-adjusts these measures to account for differences in underlying conditions, and the resulting expected readmission rates, allowing for comparison across SNFs. This report can be used to identify high performing SNFs along any combination of the risk-adjusted metrics. The three risk adjusted metrics included in the report feature color coding to distinguish data points as notably higher (Red), lower (Green) or similar (Grey) to the weighted average for that metric, which are presented on the top row of the report.

COLUMN NAME	DESCRIPTION
Discharged to SNF	Total count of patients discharged from the attributed acute care hospital to the given SNF
30-day Readmission Count - SNF	Total count of readmissions to an acute care hospital following discharge to SNF according to HEDIS <sup>®</sup> unplanned readmission algorithm.
Avg SNF Paid	Average Medicare payment to the SNF
Avg LOS	Average length of stay for Medicare beneficiaries admitted to the SNF
Normalized Avg RUG Rate	Average RUG rate for patients treated at the SNF, normalized to the overall population of patients admitted to any SNF from the acute care hospital (SNF-specific RUG Rate divided by the Overall RUG Rate – input data not shown)
Risk Adjusted – Avg SNF Paid	Average Medicare payment to the SNF, adjusted by the Normalized RUG rate (Avg SNF Paid / Normalized Avg RUG Rate).
Risk Adjusted – Avg LOS	Average length of stay for Medicare beneficiaries, adjusted by the Normalized RUG rate. (Avg LOS / Normalized Avg RUG Rate).
Readmission rate through SNF	Average readmission rate to an acute care hospital within 30 days (30- day Readmission Count – SNF / Discharged to SNF).
Avg PCR – Discharged to SNF	Expected average readmission rate for patients discharged to a SNF according to HEDIS® Plan All-Cause Readmission (PCR) methodology. PCR captures only unplanned readmissions.
Risk Adjusted Readmission Rate Through SNF	Readmission rate adjusted by expected readmission risk (PCR) relative to the overall population [(Overall Avg PCR / SNF Avg PCR) * Readmission Rate through SNF]

## 7.5.1 SNF Utilization Report Masked

The masked version of this report suppresses cells with fewer than 11 observations, as those data are considered PHI. All users – those with and without PHI access will have access to this report. Because it does not contain PHI, the report may be distributed to any relevant hospital or SNF staff.

This report can be printed in PDF (based only on the current view of the screen) and in Excel. Users will need to add conditional formatting to the Excel version of the report, as that functionality is not available in the download.

## 7.5.2 SNF Utilization Report Unmasked

The unmasked version of the report presents all available data, including those with fewer than 11 observations. Only users authorized to see PHI data will have access to this report. Distribution of this report outside of MADE should be limited to individuals authorized to see PHI.

# 8 HELP

# 8.1 Glossary

**Glossary** provides quick reference to the terms used in the CRISP CCLF application:

Term	Definition
BETOS	Berenson-Eggers Type of Service (BETOS) codes are
	a classification of CPT and HCPCS codes into broad
	categories of like services that allow for easy
	review and analysis of data.
CCS Category	The Clinical Classifications Software (CCS) is a
	diagnosis and procedure categorization system
	developed by AHRQ' HCUP project to aggregate
	diagnosis and procedure codes into a smaller
	number of clinically meaningful categories.
Cluster	Physicians are grouped into discrete groups based
	on similarity of practice patterns. Physicians with
	similar post-acute discharge patterns will appear in
	the same cluster, while physicians with dissimilar
	patterns will appear in different clusters. The
	comparison of utilization across these clusters
	allows for the calculation of potential savings
	opportunity.
Community	First post-acute setting defined by non-facility-
	based physician services.
Сорау	The amount the patient pays for the prescription.
DME	Durable medical equipment; type of service
Episode	All health care services that occurred between the
	admission to the short term acute care hospital
	(index admission) and 90 days after discharge.
	Medicare payments for all services within this
	period are included in episode payments.
ESRD	End-Stage Renal Disease (ESRD). Patients with ESRD
	are eligible for Medicare coverage regardless of
	age.
First Setting / First PAC / First Post-Acute Care	The first facility or setting that the patient was
	discharged to and received care following the index
	admission. The post-discharge period could include
	visits/admissions to multiple acute and post-acute
	settings. The first PAC setting refers to the first
	setting.
hAM	hMetrix Advance Model; predictive model to
	identify high-needs patients based on historical
	care patterns and clinical characteristics
нна / нн	Home Health Agency; first post-acute care setting
	and type of service
	· · · · · · · · · · · · · · · · · · ·

High-Risk Medication	Prescription drug identified on the American Geriatrics Society (AGS) Beers Criteria for
	Potentially Inappropriate Medication Use in Older
	Adults list. This list contains drugs that are best
	avoided in older adults and those with certain
	diseases or syndromes. Patients on these
	medications should be prescribed reduced doses or
	prescribed with caution and carefully monitored, as
	these medications have been found to be
	associated with poor health outcomes, including
	confusion, falls, and mortality.
Hospice	First post-acute care setting and type of service
Index Admission	The initiating admission at the short term acute
	care hospital. This is the event that begins the
	episode, also known as the anchor stay.
Inpatient Hospital	First post-acute care setting and type of service.
· ·	Includes short term acute care hospital admissions.
IRF	Inpatient Rehabilitation Facility; first post-acute
	care setting and type of service
LOS	Length of stay, measured in days.
LTCH	Long-Term Care Hospital
Master Patient ID	Unique patient identifier internal to MADE. This ID
	does not correspond to internal hospital patient
	identifiers.
Medical Paid (Current and Previous Year)	Total Medicare payment for all Part A and B
	services, including payments for inpatient hospital,
	outpatient hospital, skilled nursing facilities, home
	health agencies, inpatient rehabilitation facilities,
	long term care hospitals, hospice, physician
	services, and durable medical equipment. Also
	includes a proxy for beneficiary cost-sharing for all
	includes a proxy for beneficiary cost-sharing for all
	includes a proxy for beneficiary cost-sharing for all sites of service. Prescription drug payments
	includes a proxy for beneficiary cost-sharing for all sites of service. Prescription drug payments covered on Medicare Part D are excluded.
	includes a proxy for beneficiary cost-sharing for all sites of service. Prescription drug payments covered on Medicare Part D are excluded. Current year indicator refers to the most recent 12
Medication Synchronization	includes a proxy for beneficiary cost-sharing for all sites of service. Prescription drug payments covered on Medicare Part D are excluded. Current year indicator refers to the most recent 12 months of completed data. Previous year indicator

Other (Setting)	As a first post-acute care setting, represents care provided in long-term care hospitals, other
	inpatient facilities such as psychiatric hospitals,
	DME, and hospice care.
Other Facility Readmission	A readmission to a short-term acute care hospital
	that is different from the index admission hospital.
Outpatient	Type of service; includes all Part B services
	provided in an outpatient hospital setting,
	including dialysis center.
PAC	Post-Acute Care including Home Health, Skilled
	Nursing Facilities, Inpatient Rehabilitation Facilities,
	Long-Term Care Hospital, and Hospice; as well as
	non-facility physician and hospital outpatient care,
Pharmacy Paid (Current and Provinus Voar)	as well as DME, during the post-discharge period. Total Medicare payment and proxy for beneficiary
Pharmacy Paid (Current and Previous Year)	cost-sharing for Part D prescription drugs.
	Current year indicator refers to the most recent 12
	months of completed data. Previous year indicator
	refers to the prior 12 months of completed data.
Part A + Part B Members	Traditional/Original Medicare beneficiaries. These
	beneficiaries are also known as fee-for-service
	(FFS) beneficiaries. This tool only reports on these
	Part A and Part B members.
PAVE	Post-Acute Variance Explorer (PAVE) Savings
	Opportunity. hMetrix's proprietary technology to
	cluster groups of physicians based on similar
	practice patterns. PAVE identifies the savings opportunity for each APR DRG if the average post-
	discharge payments related to each physician were
	replaced with the average in the highest
	performing cluster.
Physician	Type of service; includes all physician Part B
-	services regardless of site of service
РМРМ	Per Member Per Month (PMPM) is a common
	measure for analyzing a population. This measure
	factors in the number of members as well as the
	time each member was enrolled (i.e., member
	months). The most common usage is for payments,
	where the PMPM measure is the average payments for a member over one month.
Post Discharge Enisode	The portion of the total episode immediately
Post-Discharge Episode	following the discharge from the index admission.
	This period lasts 90-days and includes all Medicare
	Part A and B services related to the episode.
PDC	Proportion of Days Covered
Proration	Episodes are prorated; meaning any stay that spans
Proration	

	how many days of the stay are within the 90-day post-discharge period.
Run Out	Due to the way Home Health episodes are paid (60- day episodes), not all claims will necessarily be adjudicated by the end of the post-discharge period. For this reason, the application includes all episodes, regardless of whether data for all claims have been provided. The application then allows the user to select whether to include these incomplete episodes, or to exclude them from the analysis.
Same Facility Readmission	A readmission to a short-term acute care hospital that is the same as the index admission hospital.
SNF	Skilled Nursing Facility; first post-acute care setting and type of service
STACH	Short-Term Acute Care Hospital; first post-acute care setting. Represents a hospital readmission immediately following discharge from the index admission prior to the patient receiving any other health care services.
Target Price	This is the pre-determined benchmark amount that will be compared to your hospital's episode payment. The target price is calculated by averaging the top 25 <sup>th</sup> percentile of providers.
Total Medication Cost / Cost	The published Average Wholesale Price (AWP), a proxy for the price paid for the prescription by a third-party payor.
Winsorization	Winsorization is the statistical process of replacing extreme data values or potential outliers with less extreme values to limit the impact of these values on analysis. For example, winsorization of paid amounts removes the impact of extremely expensive episodes and the potential skew it may introduce on a performance metric. The less extreme values or trim points or upper and lower bounds are set to the mean -/+ 3 standard deviations of the normalized paid amount by DRG. Each episode's costs are truncated at the upper and lower bounds.

# 8.2 CCLF Data Basics

## 8.2.1 CCLF

The CCLF (Claim and Claim Line Feed) data files are a set of Medicare claims files incorporating all Medicare Part A and B claims from Inpatient Facility, Outpatient Facility, Skilled Nursing Facility, Home Health Agency, Hospice, Professional, Durable Medical Equipment, and Prescription Drug services. These files contain beneficiary claim level data including Medicare payment amounts, diagnoses, procedures, dates of service, provider identifiers, and beneficiary copayment amounts. Provider cost information is not included in the data. Drugs paid for under Part A or Part B (such as drugs administered in the hospital) are included in MADE. Part D drugs are only available for the Population Navigator and Pharmacy Analytics module.

The CCLF also includes information regarding beneficiary's Medicare eligibility, such as the reason for Medicare eligibility (aged, disabled, ESRD), entitlement status, and months of eligibility for all Medicare beneficiaries enrolled during the year of the data set. These data sets contain a unique identifier for each beneficiary, allowing the linkage of beneficiary claims across the various claims files.

The CCLF data files only contain Medicare fee-for-service (FFS) claims (Part A and Part B) and does not contain any claims for beneficiaries enrolled in Medicare Advantage (Part C) or non-Medicare (private) insurance plans.

MADE is powered by the latest 36 months of data for 100% of the Maryland Medicare fee for service beneficiaries.<sup>1</sup> The CCLF includes any beneficiary with a Part A or Part B claim from a Maryland provider, regardless of the beneficiary's residency at the time of the claim. Additionally, recent enhancements now result in the Beneficiary Denominator file containing all beneficiaries who have lived in Maryland for at least one month and have at least one month without HMO during the 36-month period. This allows CCLF to represent the universe of Medicare fee for service beneficiaries, regardless of health care usage.

Use of this data is governed by a Data Use Agreement (DUA) from the Centers for Medicare & Medicaid Services (CMS) between CMS and CRISP. Using the beneficiary's unique identifier, all health care information is tracked across the available data. This allows for the analysis of episodes of care at the beneficiary level as well as analysis across the entire population.

## 8.2.2 Population Assignment

MADE contains approaches for attributing beneficiaries to Maryland hospitals: Hospital "Touch" Attribution and MPA Performance Year 2 Attribution. These two approaches can be used separately or together to further filter the attributed beneficiaries.

#### 8.2.2.1 Hospital "Touch" Attribution

<sup>&</sup>lt;sup>1</sup> Due to CMS lags in claim processing, the latest two months of the data are incomplete.

Each beneficiary in the Population Analytics module implemented for CRISP is assigned to one or more hospitals. Non-Maryland residents who receive care in a Maryland hospital are included in the "touch" attribution logic. The following is a brief description of the method used to assign beneficiaries:

- 1. The hospitals to which beneficiaries are assigned are limited to the 47 CRISP hospitals.
- 2. Beneficiaries must be enrolled in Part A and Part B (no Medicare Advantage beneficiaries).
- 3. All beneficiaries with a **touch (either inpatient claim IP or inpatient claim or emergency department visit IP+ED)** will be assigned to every hospital with a touch.

Users can select which attribution type to apply to reports in the top right of the Population, Episode, Pharmacy, and Monitoring tabs.

## 8.2.2.2 MPA Year 2 Attribution

Beneficiaries attributed to a hospital under the Medicare Performance Adjustment (MPA) policy are available in MADE. Medicare FFS beneficiaries are first attributed to providers (i.e. a physician) who are then attributed to a hospital. Hospitals have access to their MPA attributed population through various provider to hospital linkage methods. Beneficiaries attributed under the Maryland Primary Care Program (MDPCP-actual), ACOlike, physician employment with a hospital (Hospital-Owned/Employed), and physician referral patterns to a hospital (Referral) are included in MADE under certain circumstances. Beneficiaries attributed to a hospital based on the hospital's Primary Service Area (Geographic) are excluded from MADE unless a treatment relationship has otherwise been established, defined as an IP or ED touch. The exclusion of the Geographicallyattributed beneficiaries is consistent with HSCRC's data sharing requirements. The circumstances of the MPA attribution are provided below:

- 1. MDPCP-actual Under the MDPCP program, a beneficiary is attributed to a participating practice that is affiliated with a hospital-based CTO. No hospital or physician attestation is required; the lists are provided by MDH.
- 2. ACO-like Beneficiary attributed to a physician participating in a hospital-based ACO. No hospital or physician attestation is required; the lists are provided by CMS.
- 3. Hospital Owned Beneficiary is attributed to a physician with an employment arrangement with a hospital. The hospital must submit the list of employed physicians to HSCRC.
- 4. Referral Beneficiary is attributed to a physician who refers the plurality of their patients to a hospital. The hospital must attest to HSCRC that an existing Care Coordination agreement exists between the physician and the hospital, allowing the hospital to receive beneficiary-level details for the physician's attributed population. If a hospital does not attest to having this agreement in place with a physician, beneficiary-level details will not be available in MADE unless a treatment relationship (touch) has been established.
- 5. Geographic Beneficiary is attributed to a hospital based on the hospital's Primary Service Area (PSA) or by the PSA Plus (PSAP) methodology when PSAs overlap for multiple hospitals. Only beneficiaries attributed under MPA by geography with a "touch" at the hospital are visible in the application.

In addition to the MPA Attribution Types being selectable in the top right of MADE, additional MPA information is presented at the beneficiary level in the following Population Navigator columns:

- "MPA Attribution" indicates the MPA attribution category in which the beneficiary is attributed to the hospital. This field is only populated for MPA attributed beneficiaries to the selected hospital. Blank cells indicate that the beneficiary is **not** MPA attributed to the selected hospital. Blank cells will only occur for beneficiaries who have touched the selected hospital but are not MPA attributed there.
- "MPA Attributed Physician" identifies the MPA attributed physician for each beneficiary. This field is only populated for MPA attributed beneficiaries to the selected hospital. The physician will not be available for beneficiaries attributed to the selected hospital through Geographic or Referral when a Care Coordination Agreement has not been attested. Furthermore, the physician will not be available for ACO and MDPCP attributed beneficiaries if their participation with the program/ACO changed and/or if the hospital did not submit appropriate attestations to HSCRC
- "MPA Attributed Hospital" indicates the hospital to which the beneficiary is attributed. The MPA attributed hospital is identified for all MPA-attributed beneficiaries, regardless of the hospital selected. Beneficiaries geographically-attributed to hospitals are often attributed to more than one hospital. In these instances, the field will show "multiple" hospitals. As not all beneficiaries in MADE are attributed to a hospital, this field may remain blank for some "touch" attributed beneficiaries.

Explanation of the physician attribution process is contained in section <u>8.2.3.2</u> <u>Physician Attribution under</u> <u>MPA</u>.

#### 8.2.3 Physician Assignment

### 8.2.3.1 Physician assignment in Episodes

Each episode in the Episode Analytics module implemented for CRISP is assigned to a physician. The assigned physician is the physician most responsible for the index hospitalization that initiates the episode. The assignment is based on two physicians identified on each inpatient hospital claims: the attending physician and the operating physician.

If the index hospitalization is a surgical discharge, the episode is assigned to the **operating physician** or surgeon. If the operating physician is not recorded on the claim, the **attending physician** is assigned.

All remaining episodes (i.e., a medical discharge) are assigned to the attending physician.

#### 8.2.3.2 Physician Attribution under MPA

Each beneficiary attributed under MPA, with the exception of those attributed through hospitals' Primary Service Area (Geographic), are linked to a physician as their MPA-attributed primary care physician (PCP). MPA designated PCPs for each beneficiary are presented in Population Navigator in the "MPA Attributed Physician" column.

MPA Attributed Physicians are only available for beneficiaries attributed to the specific hospital selected.

For more information on MPA, please refer to the <u>Final Recommendation for the Medicare Performance</u> <u>Adjustment (MPA) Policy for Rate Year 2021.</u>

#### 8.2.4 Episode

Episodes are clustered into APR DRG "families" using a two-step process. First, according to Maryland's Care Redesign Program for Episode Care Improvement Program (ECIP), clinical episode categories were developed based on CMS' Center for Medicare and Medicaid Innovation (CMMI) Bundled Payment for Care Improvement (BPCI) Advanced initiative. These clinical episode categories are equivalent to a subset of the APR DRG families presented in MADE. Next, an expanded set of APR DRG families are created based on the clinical episode categories from the initial Bundled Payment for Care Improvement (BPCI) initiative. Clinical conditions that are associated with neither BPCI nor BPCI Advanced are not included in MADE. The source definitions for all clinical episodes are based on MS-DRG. MS-DRGs are converted into APR DRG version 35. In doing so, some distinct episode categories in BPCI or BPCI Advanced are consolidated. See <u>APR DRG Family</u> for a complete list.

Individual episodes are initiated by the inpatient admission of an eligible Medicare FFS beneficiary to an acute care hospital for one of the included APR DRGs. The episode includes a Medicare beneficiary's inpatient stay in the acute care hospital, post-acute care, and all related services during the episode of care, which ends 90 days after hospital discharge. Episodes include all related Parts A and B services provided during the duration of an episode including hospital care, physician care, readmissions, post-acute care and durable medical equipment. Episodes exclude Part B services that CMS has determined are unrelated to the index admission including transplantation, trauma services, acute surgical procedures and cancer care.

The episode consists of two main segments:

- Index admission The period of time between the admission date and the discharge date of an episode-initiating inpatient hospital stay for a participant
- Post-Discharge Episode Period The period of time covering 90 days from the discharge date of an index admission, as defined by the participant for a given episode type (beginning the same day as the index admission's discharge date).

Note that any APR DRG Families described in **APR DRG Family** that have no data for a user's hospital will not appear in the selection menus.

APR DRG FAMILY	APR DRGS
ECIP Clinical Episode Categories	
Acute myocardial infarction	190
Back and neck except spinal fusion	310

#### 8.2.5 Readmission

A readmission is defined as an admission to a short-term acute care facility that occurs shortly after a discharge from the same or a different short-term acute care facility. Most often, it is measured as within 30 days after the initial discharge, but it could be shorter or longer. Such readmissions are often, but not always, related to a problem inadequately resolved in the prior hospitalization.

In the often cited 30-day readmission rate, transfers from one short-term acute care facility directly to another short-term acute care facility are excluded from the rate. Such transfers may occur in order to provide the patient services that the discharging or transferring short-term acute care facility may not offer.

CMS CMMI BPCI episodes alter this all-cause readmission definition and MADE alters them further. All shortterm acute care facility admissions within the 90-day episode time period are counted as readmissions of the index admissions. MADE's implementation does not apply CMS BPCI's exclusions for unrelated readmissions. In CRISP's implementation of BPCI episodes, the index admission hospital is responsible for all readmissions within the 90-day episode period, regardless of whether the readmission is related to the APR DRG of the index admission.

It is also important to note that readmissions are being reported throughout the entire 90-day episode but are presented in the context of the first post-acute care settings. Therefore, a readmission that occurs after discharge from the first post-acute care setting is still attributed to that first setting.

CARE SETTING	LONG DESCRIPTION	SHORT DESCRIPTION	ABBREVIATIONS	PAC SEQUENCE OF CARE	PATIENT DETAILS - SEQUENCE	PATIENT DETAILS - PIE
STACH	Acute Care Hospital	ACH	А	Х	Х	Х
IRF	Inpatient Rehab Facility	IRF	I	Х	Х	Х
SNF	Skilled Nursing Facility	SNF	S	Х	Х	Х
НН	Home Health Agency	ННА	Н	Х	Х	Х
Physician	Ambulatory Care	Ambulatory Care	С	Х	Х	Х
Outpatient	Ambulatory Care	Ambulatory Care	С	Х	Х	Х
OP Therapy	Ambulatory Care	Ambulatory Care	С	Х	Х	Х
ER	Emergency Room	ER	E	Х	Х	Х
DME	Durable Medical Equipment	DME	(Not Presented)		"Other"	
LTCH	Long Term Care Hospital	LTCH	L	Х	Х	"Other"
Other IP	Inpatient Other	Inpatient Other	Z	Х	Х	"Other"
Hospice	Hospice	Hospice	Т	Х	Х	"Other"

## 8.2.6 Care Setting Abbreviations

"Ambulatory" includes care received while the patient resides in the community; including physicians, outpatient hospitals, clinics, ASC, IDTF, dialysis centers, chemotherapy treatment centers, occupational therapy, physician therapy, and speech therapy. DME will not appear as a sequence and is grouped in "Other" in the Details report Pie chart.

## 8.2.7 Cost Adjustment Factors

Relative costs are used to normalize the data before computing the target price and to convert the target price back for each hospital. The following steps describe the method used to calculate the cost adjustment factors that are used to determine relative costs:

- 1. Compute the average payment per discharge for each hospital (and in total) based on the CCLF data for each hospital.
- 2. Calculate the case mix index (CMI) for each hospital (and in total). The case mix index is the average APR DRG weight per discharge. hMetrix is using APR DRG version 35.

- 3. Divide the average payment per discharge by the case mix index.
- 4. This CMI adjusted average payment per discharge for each hospital is divided by the CMI adjusted average payment per discharge for all hospitals. This calculation gives the relative cost for each hospital.

To ensure that these relative costs are reasonable estimates, they were compared to the Resumption of Care (ROC) numbers. These costs are based on the Maryland data and, hence, implicitly include variation in cost due to factors other than unit cost at hospitals. It will not reduce variances in index hospitalization costs which is what is required for this adjustment. It highlights the post-acute care variances.

#### 8.2.8 Target Price

Each episode in the Episode Analytics module is based on an APR DRG. The episodes are defined using the method developed under the CMS CMMI BPCI program. The following is a brief description of the method used to calculate the benchmark for each APR DRG.

Each APR DRG episode will have a single benchmark for each year. The benchmark will be adjusted using hospital specific cost adjustment factors to come up with hospital specific benchmark.

#### Steps:

- 1. Restrict episodes to the ones initiated (index admission) by the 47 CRISP providers.
- 2. The allowed payment amount from the claims data will be normalized as follows:
  - a. Inpatient and outpatient claims are adjusted using the hospital specific cost adjustment factor.
  - b. For all other claim types, the wage factors for the Index admission provider will be used to normalize the allowed amount from the claims data.
- 3. The normalized amounts will be summarized by episode to compute the episode amount.
- 4. Outliers will be winsorized at the 5th and 95th percentile values of the normalized episode amount for each APR DRG.
- 5. APR DRGs will be grouped into APR DRG Families using the logic used by the CMS CMMI BPCI program.
- 6. The provider level average normalized episode amount for each APR DRG family is then calculated using the winsorized data.
- 7. Low volume providers with fewer than five episodes in each APR DRG family will be removed from each APR DRG Family.
- 8. After removing the low volume providers, the 25<sup>th</sup> percentile of the provider level average, normalized episode amount is then calculated. This is used to identify the top 25% of providers in each APR DRG family.
- 9. The APR DRG family benchmark is the mean of the top 25% of providers in each APR DRG family.
- 10. The hospital benchmark will be computed from the state-wide benchmark by adjusting the normalized benchmark using the cost adjustment factor and wage adjustment factor in the proportion of inpatient and outpatient amounts vs all other amounts for each APR DRG family.
- 11. The annual trend on case mix adjusted overall average normalized dollars will be used to compute the benchmark for each year.

#### 8.2.9 hMetrix Advanced Model (hAM)

CCIP incentive opportunity development relies on a predictive modeling tool. The predictive model, the hMetrix Advanced Model (hAM), was custom built by CRISP's data vendor partner, hMetrix. The model was built using state-of-the-art modeling techniques based upon a machine learning ensemble algorithm. Ensemble algorithms create multiple models and evaluate the results ('learning' from the results of each). The ensemble algorithm then combines the methods to produce more accurate solutions.

The model predicts the impactable utilization for the next 12 months for each Medicare Part A and Part B member in Maryland.

#### Data for Machine Learning Ensemble Algorithm

The model was built based on Maryland Medicare CCLF data 2014-2016.

#### Predictive Variables

The model incorporates data available in Medicare Part A and Part B claims as predictive variables to develop utilization flags and identify impactable costs and total costs. By design, machine learning ensemble algorithms create, test, and learn by employing the range of variables available to the model. hAM found that the predictive variables with the greatest influence include both clinical and utilization values such as:

- Diagnoses
- Procedures
- Revenue centers
- Places of service
- Physician specialties
- Inpatient admission count
- Inpatient length of stay
- Emergency department visit counts
- Clinical severity measures derived from HCCs

#### Model Training

The model was tested using standard industry methods for training predictive models. To greatly reduce the chance of overfitting the model, the members were randomly assigned to be in either the test group (20%) or the training group (80%). The training group was used in the formation of the model, while the test group was used to test the performance of the model. Put another way, the performance of this model would be computed using members who were not used in the formation of the model. This means the performance of the model cannot be attributed to an overfit model.

#### Model Evaluation

Model results were compared to the Medicare HCC, Elixhauser, LACE, and "3 or more bedded visits" models on the same population. hAM outperformed the existing models' positive predicted value by nearly 50%.

#### hAM in MADE

The model's risk score is presented in Population Navigator as a selectable column. Of note is that the risk score is only calculated for beneficiaries that have not expired and are enrolled in Medicare FFS as of the most recent monthly data refresh. Otherwise stated, expired beneficiaries or those not enrolled in Medicare will not display a hAM score.
